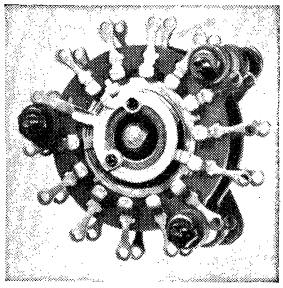
LAMINATED ROTARY SWITCHES, INSTRUMENT AND TESTER TYPE

• 14- and 20-Position • Single and Multi-Deck, Military or Commercial

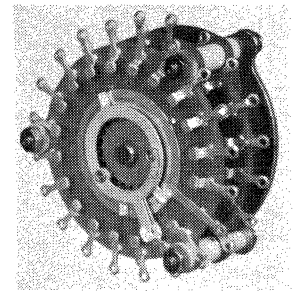


SS-14-2 Laminated

• **USES** — J-B-T Instrument-type Rotary Selector Switches are extensively used in quality test equipment, portable instruments, inspection setups, military or civilian avionics wherever trouble-free, dependable performance is of major importance. Available as a 14- or 20-position in laminated construction shown here or molded types described on opposite page—the design gives extra contacts in minimum space. One to six decks.

• FEATURES

Reliability — Rigid, 3-post deck suspension, instead of the usual 2; all current carrying parts are brass or phosphor bronze, silver flashed and then heavily plated with fine silver to meet 100 hour salt spray test; ball bearing action, beryllium-copper balanced spring (SS-14); leaf type (SS-20), and sharp detent assure positive indexing. Springs are replaceable without disturbing soldered connections. Laminated plastic decks and rotors are selected for maximum mechanical and dielectric strength. Insulation resistance above 50,000 megohms.



SS-20-2 Laminated

Low Contact Loss — Double-grip collector arms, and large-area contacts, silver to silver, result in an average contact resistance of .007 ohms or less.

Ample Dielectric (Conservatively Rated) — Carries 1 amp., 125 volts VAC, inductive load; maximum momentary capacity (not make-and-break), 5 amp, AC or DC; maximum voltage between contacts 1500 volts AC, R.M.S.; between decks and ground, 2000 volts AC, R.M.S.

Military or Commercial Variations — The following are typical of switches supplied on special order at extra cost: (a) laminated plastic, Type PBE-P per Spec. MIL-P-3115B; (b) fungus-proofing by vacuum impregnation of rotors, decks, spacers, and ceramic spacers using approved fungicides; (c) hot tin dip on contact surfaces to be soldered; (d) 14 or 20 live positions, no off (add suffix F, as SS-14-2F or SS-20-1F); (e) common position in non-standard location. For description of SS-14 materials, finishes, and government-quality features, see Print SK-42, Rev. B and Print SK-116 Rev. A for SS-20.

BASIC 14-POSITION (SS-14): 13 circuits and "off" per deck in 2" circle for compactness, angular indexing 25°43'. **1¼" Bar Knob (KN-14)** supplied only on individually boxed units—not on bulk orders unless specified. **Collector arm** normally placed directly opposite to flat of shaft so that knob pointer points to live contact. **Contact lugs** and common lugs positioned as shown below, 13 contacts per deck. **One to six decks;** for each additional deck (or gang) add 5/16" to depth. **Continuous rotation type** supplied unless otherwise specified. **Adjustable Stop** normally is supplied on standard cataloged switches. **Fixed Stops** can be supplied on quantity orders at moderate cost. **Panel locator** positioned as shown unless otherwise specified on bulk orders.

BASIC 20-POSITION (SS-20): 19 Circuits and "off" per deck in 2-23/32" circle for compactness, angular indexing 18°. **2" Bar Knob (KN-16)** supplied on individually boxed units—not on bulk orders unless specified. **Collector arm** normally placed directly opposite to flat of shaft so that knob pointer points to live contact. **Contact lugs** and common lugs positioned as shown below, 19 live positions per deck, standard. **One to six decks:** for each additional deck or gang add 5/16" to depth. **Continuous rotation** type supplied unless otherwise specified. **Panel locator** positioned as shown; can be modified on bulk orders.

COMBINATIONS IN SS-14 and SS-20 SERIES: Besides the military and commercial variations listed above, shorting and non-shorting decks can be assembled on the same switch shaft. Reference to the sketch below will be helpful in numbering decks and contacts when ordering non-standard assemblies. Specialized requirements for stainless steel shafts, no flats or double-flats on shaft, longer projections beyond bushing, and other variations can also be supplied, with necessarily longer delivery time and additional cost.

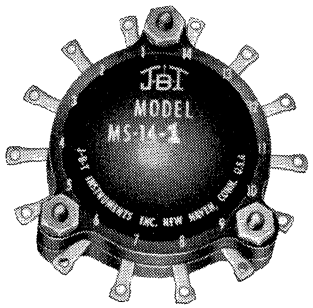
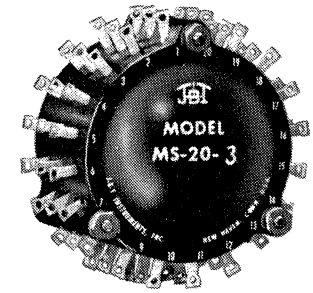
MOLDED ROTARY SWITCHES, INSTRUMENT AND TESTER TYPE

- **14- AND 20-POSITION • STANDARD OR BONDED RUGGEDIZED TYPES • SHORTING AND NON-SHORTING**
- **All moving contacts enclosed—minimizes dirt and corrosion; 3-post deck suspension for rigidity; double-grip collector arms for positive contact; and rectangular drive shaft for precision indexing.**
- **Interchangeable, electrically and mechanically, with SS-14 and SS-20 laminated switches.**



MS-14-1 Molded

FEATURES AND USES: These switches have values as stated for laminated switches on opposite page. Besides fully enclosing all moving parts, the molded switches differ in the design of the detent mechanism, but both types provide rigid 3-post construction and positive indexing. Test results are available on request covering certain procedures of MIL-E-5272A on insulation resistance; high and low temperature and temperature shock; humidity; altitude; salt spray; vibration; fungus resistance; rain; sand and dust; explosion; shock; and endurance values. (Ratings for MS-20-6DTS Types differ somewhat.



MS-20-3 Molded

★★★ **BONDED RUGGEDIZED TYPES**—As indicated in the tables, all molded rotary switches may be ordered with bonded construction as MS-14B or MS-20B types using cured laminations for ruggedization, shockproofing and further enclosure. Add cost of 35¢ per deck to catalog price of basic switch. Thus, 2-deck switch is MS-14B-2 at $3.80. Bonding adds approximately 1/64" per deck.

BASIC 14-POSITION MOLDED (MS-14): 13 circuits and "off" per deck in 2 3/32" circle for compactness.

BASIC 20-POSITION MOLDED (MS-20): 19 circuits and "off" per deck in 2 5/8" circle.

Molded end cover regularly supplied. 1 1/2" **Bar knob (KN-14)** included with individually boxed MS-14 units, 2" **Bar knob (KN-16)** with MS-20 units, but not on bulk orders unless specified. **Collector arm** placed directly opposite to flat of shaft, so that knob pointer points to live contact. **Common or "off" contact lug** is rounded and bent down for ready identification. **Extra decks** add 19/64" per deck to depth; for 7 decks and over, add 5/16" for shaft support and 1/64" per deck for bonding. **Continuous rotation** type supplied. **Permanent stop** (MPS types) with pre-set fixed stops are available on special orders. **Adjustable stop** (MAS type) available only on MS-14 Series. **Panel locator** available at extra cost on quantity orders when specified. On MS-14-4, MS-14-6, MS-20-4 and MS-20-6, extra hex nut and longer screw can be supplied for inverting supporting screw nearest common, thus converting into panel locator. **Complete dimensions:** for MS-14, MAS-14, MPS-14 switches, 1 to 6 decks, request Print SK-111 Rev. D; for 7 decks and over, SK-112 Rev. C. For MS-20 and MPS-20, 1 to 6 decks, request Print SK-113 Rev. D; for 7 decks and over SK-114 Rev. C.

6-POLE DOUBLE-THROW PER DECK—1 OR 2 DEC

6-Pole Switches (DT Series). Double-throw switch of 6 circuits per deck through two positions (throw) becomes easy with this unique rotary-t molded switch. It is fully enclosed and similar appearance to other molded MS-20 switches. (Il tration shows protective cover cut away.) Cir arrangement is designated on the metal front of switch. Quality features include .007 ohm aver contact resistance; heavy, fine-silver plating 100-hour salt spray test; double-grip collector ar Made in non-shorting (break before make) shorting (make before break) 2 5/8" max. diame one deck 27/32" behind panel; two deck, 1 3/32" bel panel. DTS Shorting Types are rated 1500 volts R.M.S. between contacts and grou 1000 volts R.M.S. between contacts. See **MS-20-1-6DT, MS-20-16DTS,** and **MS-20-2-6**

PRACTICAL NEW IDEA: RING-CONTACT SWITCH

Use the unique J-B-T ring-type (suffix R) molded switch to avoid the possibility cold-soldered joints and the cost of assembling jumper wires when adjacent extern contacts are to be joined. An integral ring holds all the contacts on a deck togeth and can be snipped where wanted. This feature adds 7/32" o.d. to the MS-14 or MS- models. Additional cost is nominal; for example, 2-deck MS-14R-2 is $3.65 catal price. Ask for Print SK-88 Rev. C on 14-position and SK-89 Rev. C on 20-positic

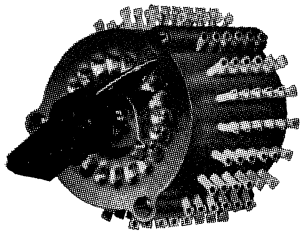
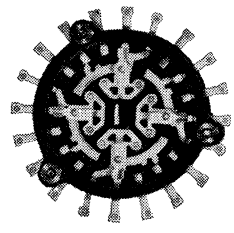
NEW MULTI-POLE MOLDED ROTARY SWITCHES, SERIES 20M.

• Superior Molded Material • All Models Bonded & Ruggedized • Panel Seal Available



Front View Showing Panel Locator which is Normally at 3 o'clock Position.



Rear View with Back Cover Cut Away to Show 4-Pole Construction with 4 Live Switching Contacts.

Although the new 20M- Series is ¼" longer behind the panel than the 20-position molded switches described on the preceding page, the two styles are otherwise interchangeable in dimensions. Providing 19 live positions and off, the 20M- offers these additional features:

1. **Increased Versatility of Circuitry** — up to and including four poles per deck;
2. **Upgraded Insulation Resistance and Dielectric Qualities** — by use of melamine stators and rotors (or other MIL-M-14 molded materials when specially ordered);
3. **Built-in Panel Locator or Non-Turn Device;**
4. **Extended Switch Life** — new contact design with rotor brushes of phosphor bronze heavily silver-plated;
5. **Bonded and Ruggedized Construction;**
6. **Radial Alignment of Multi-Pole Contact Surfaces** — by means of newly-designed double-ball detent with diaphragm-type springs.

VARIATIONS OF 20M- — Please request SK-142 for full dimensions and circuit diagrams. Besides the condensed listing in the accompanying table, various combinations of **shorting and non-shorting contacts for each deck** may be made. **Fixed stops** are built-in but may be provided for single-pole switches when specially ordered. **Over six decks** can be supplied for a reasonable number of poles; extra decks add 5/16" per deck and 5/16" per switch for rear support SU-3. **Ring-contact** (suffix R) may be specially ordered.

PANEL SEAL PS20M- SERIES — Sealed shaft and bushing meet the requirements of MIL-S-3786A for sealing. For details ask for SK-143. The seal (prefix PS) adds $1.75 per switch to catalog price.

- **Unusual Versatility — More Contacts per Deck**
- **Accelerated Snap-Action Detent**
- **MIL Materials Throughout for Military & Non-Military Applications**

CAUTION—MIL-S-3786A, a sophisticated specification, spells out more than one performance level in each of several categories, such as Temperature-Life, Vibration, and Shock, with each level designated by its own symbol. Only J-B-T SR05 Switches meet the highest (and all other) levels.

USES — For test equipment, airborne and transistorized equipment, geophysical apparatus, and other miniaturized electrical and electronic devices.
TWO BASIC SERIES — Full 12 live switching contacts per deck are available in **Series 7000** using a patented wafer design feature where rotor contacts are on the front, and switching contacts are on the rear of the same deck. 1 to 4 poles per deck 1 to 6 decks, standard.
Up to 8 poles per dual-duty deck are available in **Series 5000** which has up to 12 contacts including common on the front, and up to 12 contacts including common on the rear of the same deck. 1 to 4 poles on each side of dual-duty decks; 1 to 4 decks, standard.
THREE ROTARY TYPES — Both Basic Series are made in 3 types: **MILITARY STYLE SR05,** numbered for specific performance levels of MIL-S-3786A; **V TYPE,** of similar construction to SR05, but not ordinarily subjected to full military test procedures; and X TYPE, using the same materials as V type switches, but intended as replacements for previous models or as original components for non-military devices where requirements are similarly exacting.
LEVER SERIES (L Types) — Made as VL-7000 or VL-5000 Series, 1 to 4 decks. Illustrated on preceding page.
KNOBS — Supplied with individually boxed switches on V and X types; not supplied on SR05 because separate military specification applies.

DIFFERENCES BETWEEN SR05 MILITARY, V, and X — Switches other than X types use extra rugged index mechanisms and rotor construction.

OVER 130 MODELS FOR USES WHERE DEPENDABILITY COUNTS

• **ALL HEAVY DUTY MS and AN** models use solid **coin silver contacts and rocker arms,** exclusive in J-B-T construction, to add overload protection and keep contact resistance under .005 ohms. These and other features more than pay for themselves in trouble-free operation whether in normal use or exceptional environments.

MIL-S-3950A SERIES — Single-pole MS35058 with suffix —21 and above, and double-pole MS35059 types with suffix —21 and above are recommended when maximum reliability is required. Temperature, endurance, and altitude requirements exceed earlier MS types (suffix —1 to —19), AN3021 and AN3027 switches to MIL-S-6745, and ST styles to JAN-S-23 and MIL-S-21195A-(Ships). All MS switches contain a silicone rubber bushing seal to meet sand and dust and 15-foot head of water submersion tests.

OUTSTANDING 4-POLE SERIES

• There is no mistaking the light brown color and silver printing of these distinctive J-B-T 4-pole heavy-duty switches. The superior molded body, chosen after extensive tests, features high arc resistance and low shrinkage. As a result the switches exceed the rigorous electrical endurance requirements of MS-25068.

Equally important, the internal construction uses rocker arms and contacts made of solid coin silver (not clad or brazed). The 8 models listed here have silicone rubber bushing seals and solderable 6-32 screw terminals, the same as other heavy-duty MS switches.

NOTE A: MS and AN types use internal sand and dust toggle seal and other high performance features involving extra cost over ST types. MS types to MIL-S-3950A have internal toggle seal to meet 15 ft. water submersion test. MIL-S-3950 models are superseded by MIL-S-3950A models.
NOTE B: For heavy-duty switches in the MS25068, MS35058, and MS35059 Series, MIL-S-3950A calls for SCREW TERMINALS ONLY. These terminals have SOLDERABLE FINISH and may be soldered after removal of screw.

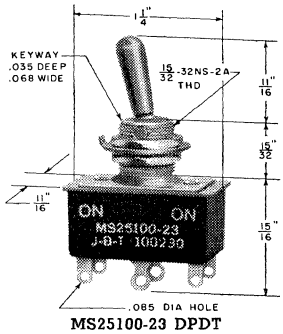
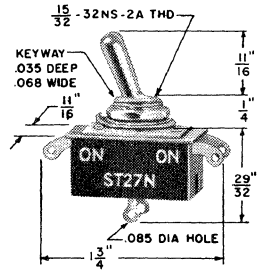
TOGGLE SWITCHES — MEDIUM DUTY — SINGLE & DOUBLE POLE — GOVERNMENT QUALITY



MS25100-23 DPDT
Rear Conn.,
Lever Seal



ST27N, DPDT
Side and Rear Conn.
¼" Bushing

Series MS25098 and MS25100 to MIL-S-3950A; Series ST12-27 to JAN-S-23, MIL-S-21195A(Ships), or DDAX Drawings.

● **MEDIUM DUTY** describes the current-carrying capacity—nominally 6 amp. at 125 VAC, 3 amp, at 250 VAC—rather than the life characteristics. Self-wiping heavily silver-plated double-grip contacts provide exceptional reliability. Typical uses: instruments, data processing, and communications circuits.

NEW DESIGN FOR MS25098 & MS25100—Significant internal changes now provide fast break, wide gap, and increased insulation values, to surpass the severe endurance tests of MIL-S-3950A. For example, after 20,000 cycles of operation at 65,000′ altitude with resistive load of 5 amps. at 125 VDC, contact resistance was well within the permissible limits. This development is especially important for the double-throw models MS25098-23 and MS25100-23. All MS medium-duty models contain: (a) silicone rubber bushing seal for sand, dust, and 15-foot head of water submersion tests, and (b) case-to-terminal sealing.

SIZE AND TERMINALS—Whether MS series to latest MIL-S-3950A, or ST series to prior Specifications JAN-S-23, MIL-S-21195A(Ships), or DDAX drawings, all have solder terminals. Bushings are 15/32" (except as noted †).

Applications: selective-calling mobile communication equipment, remote data transmission, and simultaneous or sequential coding and decoding. For further data ask for Bulletins 162R and D664.

RR-A11-and RR-A10-types frequency sensitive electro-mechanical relays (decoders) are highly stable control devices. They intermittently make and break contacts when a signal of the same frequency as the tuned reed is received. Although the reed has a high Q, the bandwith at which the relay responds will be proportional to the input signal level. Type RR-A10 with clamp is recommended for mobile uses.

RO-B Oscillator Controls (sometimes known as tone generators or encoders) are dual-reed units internally shock mounted and of sea construction. These units control the frequency of oscillation in vacu tube or transistor oscillator circuits. The RO-B Type oscillator con is recommended where accurate and stable AC signals are requir

RR-D Types are internally shock mounted resonant reed relays. Th types are square, sealed, plug-in units with 7 pin miniature plug.

RO-D Types are single reed, internally shock mounted oscillator cont for applications where space saving is of importance. Dimension these units are identical to RR-D relays and are plug-in types of 7-pin miniature.

LICON® PRECISION SNAP-ACTION SWITCHES

LICON® "DOUBLE-BREAK" ACTION

A unique approach to the concept of double-break switching is the common denominator in a wide line of Licon miniature switches that speak for themselves . . . well over 20 million times. The Licon difference is in design and materials. Dual non-stressed blades and low-rate simple coil springs put life in the snap action. Double-break contacts increase the interrupting ability by providing eight surfaces and two gaps to boost capacity and life. Long-stroke wiping keeps the action alive, "cleans" contacts every actuation, minimizes chances of contact weld.

Small, sensitive, automatically safe

Particularly ideal for transmission equipment!

#L-2-S

#L-4-S

Mechanical Interlock allows only one circuit to function at a time—and you can depend on it! LEKTRO-LOK operates on the teeter-totter system, with selective circuits. Pressure on one side actuates one circuit, release of pressure automatically returns switch to normal "off" position. Pressure on the other side is required before second switch is actuated, independent of first. Yet LEKTRO-LOK requires only a single cord—eliminates costly harness assemblies! Rugged stamped metal housing, black crackle finish. Weight, 10 ozs. 5" long, 2¾" wide, 1¼" high. Single pole, double throw. Rating (A.C. only) 15 amps at 125 volts, 15 amps. at 250 volts.

LIMITED CURRENT FUSES & HOLDERS

A new approach to circuit protection completely eliminating the possibility of overfusing circuits. This has been accomplished by a combination of three different fuse lengths and seven different widths of bayonet locking tabs on the fuse caps.

The Limited Current Fuse Holder is designed to accept only the size, amperage, range and type (regular or slo blo) in its amperage range. The fuse locks into the holder by means of a bayonet lock which permits easy and quick insertion and removal of fuses.

STANDARD FUSE CLIPS

For the exacting performance often required in the electronics communications, radio, television, aircraft and marine equipment industries, we recommend our beryllium copper fuse clip. Beryllium copper clips have lower contact resistance and higher conductivity than ordinary fuse clips. They are silver plated, a finish well suited to fuse applications.

FUSE MOUNTING BASES

Fuse Mounting Bases to accommodate the 3AG Cartridge type auto fuses. Bases are made from 1/16", 1/8" and 3/16" thick XP laminated phenolic. Clips are made from spring brass nickel plated terminals .018 brass hot tinned.

Rectifier mounting bases made from XP laminated phenolic, clips are made from .020 spring brass cadmium or silver plated. Stops are lanced in clips and are assembled in a manner to insure polarization.

Diode clip base assemblies made to suit your specific needs. The diode clip employed, cuts soldering costs and insures good electrical connection.

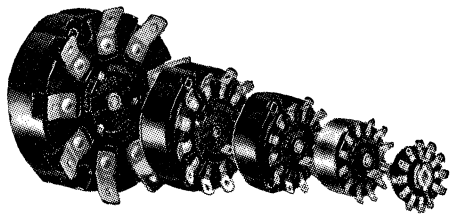
POWER TAP SWITCHES NON-SHORTING TYPE



Each switch is a non-shorting, single pole, rotary, multi-position unit, but switches can be ordered assembled 2 or 3 in tandem (2 maximum, for Model 111) to form multipole assemblies. All ceramic insulation, large, solid silver-to-silver contacts, and "slow-break" action especially designed for alternating current use establish new standards of dependability and performance. Switch shafts are electrically "dead"—insulated by strong ceramic hubs. Contacts and mechanism are entirely enclosed and protected (except for the Model 111).

HEAVY DUTY — SINGLE-, DOUBLE-, & 4-POLE — GOVERNMENT QUALITY

OVER 130 MODELS OF MIL (MS), AN, AND JAN (ST) TYPES

• **ALL HEAVY DUTY MS and AN** models use solid **coin silver contacts and rocker arms,** exclusive in J-B-T construction, to add overload protection and keep contact resistance under .005 ohms. These and other features more than pay for themselves in trouble-free operation whether in normal use or exceptional environments.

MIL-S-3950A SERIES — Single-pole MS35058 with suffix —21 and above, and double-pole MS35059 types with suffix —21 and above are recommended when maximum reliability is required. Temperature, endurance, and altitude requirements exceed earlier MS types (suffix —1 to —19), AN3021 and AN3027 switches to MIL-S-6745, and ST styles to JAN-S-23 and MIL-S-21195A- (Ships). All MS switches contain a silicone rubber bushing seal to meet sand and dust and 15-foot head of water submersion tests.

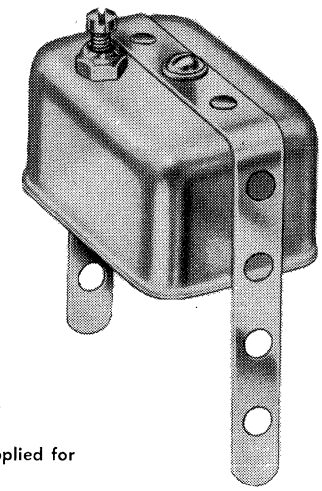
MOTOR STARTING SWITCH



FEATURING . . . . . .

- Universal application—only two switches needed to service all single phase, split phase, or capacitor motors of 1/6 to 1/3 hp inclusive.
- Quickly and easily installed—internally, externally, or remote...in any position.
- Simple, but rugged and foolproof.
- Fully enclosed—dust and dirt proof.
- Long, dependable life.
- Dimensions: 1-11/16" long x 1" wide x 1-1/8" deep.
- The Sorenson switch is designed to replace the conventional centrifugal type switch on single phase, split phase, or capacitor motors, ranging from 1/6 to 1/3 hp inclusive, 110/220 volts, 50/60 cycles. The switch will start motors in the above range within any standard rpm rating, even under the heaviest starting loads, plus or minus 15% to 30% voltage variations, according to the design of the motor.

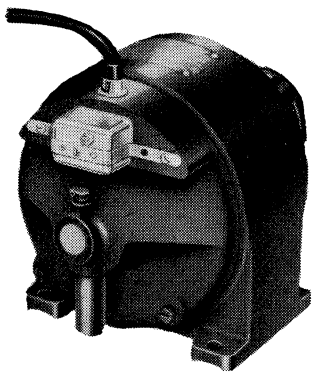
HOW THE SORENSON SWITCH OPERATES

The switch operates on the magnetic principle. It is simply connected in series with the working winding of any type motor. It operates by the momentum of the starting current, and responds to open the starter winding circuit at the pre-determined rpm rating. No internal adjustment required. An adjusting screw (externally operated) provides a means of universal application of the switch to all motors within the above mentioned hp ratings, under all voltage conditions. Specific instructions for making this adjustment are included with each switch.

QUICKLY AND EASILY INSTALLED INTERNALLY, EXTERNALLY or REMOTE



The slotted metal strap attached to the switch case provides the means for extremely flexible mounting, internally, externally or remote.

ERSA CONTROL TRANSFORMER MODELS R30 AND R10

R30
R10

Both transformer models have a primary voltage regulator for 110, 125, 150, 220 and 240 volts. The secondary voltage is also variable within the range of 5 to 6.5 volts, thus making it possible to select a temperature range between 240 to 480°C. When not in use, the ERSA iron rests on a special nozzle provided on the transformer. This protects against overheating.

Control Transformer R10 was solely made for use with the ERSA-MINIATURE Iron Model 10W. The R30, with a greater output, permits universal use of all the various ERSA irons with their different capacities.

Price
MODEL R30, rated 30 VA, 5.1# $25.00
MODEL R10, rated 10 VA, 3.5# $15.00

BOKER U.S.A. IN-DUS-TRONIC TOOLS QUALITY SINCE 1837 ®

DESIGN IN-DUS-TRONIC tools are more streamlined, with slender jaws and fine points, to reach into the tight spots and perform the specific work required of the electronics technician.

TEST AND INSPECTION Individually tested for hardness, each tool must maintain highest standards for handle strength and cutting ability. To assure perfect jaw alignment, pliers must cleanly cut single bond paper strips and snip cotton-covered lamp cord without fraying. Each tool is guaranteed against defects in workmanship and materials.

WORKMANSHIP IN-DUS-TRONIC tools are hot drop-forged from special analysis alloy steel, machined and finished with the same care and precision which have made world-famous BOKER TREE BRAND Fine Cutlery and surgical instruments for over a century. Individually fitted and adjusted, each is accurately heat-treated by HYDRIZING, which minimizes "carburization" and "decarb". Cutting blades are precision-hardened with electronic controls, and honed by hand for keen edges that retain their sharpness.

PLASTIC HANDLES— (TN-22, TN-33, TN-44, TN-55) (M2T, M3T, M4T, M5T) are of Tenite II, hex and will not roll off the work bench. Shock-proof, practically unbreakable and will stand rough use on industrial production lines.

METAL HANDLES—(AL-22, AL-33, AL-44, AL-55) are aluminum alloy 4" x ⅜" hex and won't roll off the work bench. Being metal, are NOT SHOCK-PROOF and hence not recommended for ordinary radio-TV service work, especially on a 'live' unit. However, these handles are practically unbreakable and were designed to take rough use on industrial assembly lines and can be used as PRY BARS in lining up components.

METAL ENDS—(separated from each other) non-magnetic stainless steel, to which solder won't adhere. Are firmly seated in handles and are twist-proof.

FORKED END—straddles the wire and with a slight twist, grips it for easy unwinding and removal, or guides it into another lug for soldering. Since plastic handles act as insulation, there is no danger of shock when working on sets in operation. ⅛" forks are made especially for use on printed circuits and transistors.

SPADE END—is a reamer to clean lug holes of solder.

CURVED END—can be used as a scriber for marking chassis. As a circuit tracer when looking for loose connections. As a dial cord stringer. Hook can be bent to a 90 degree angle if desired.

KNIFE & SCRAPER—for cutting and repairing printed circuits.

WIRE BRUSH — has approx. 200 bristles of stainless wire .0035 in dia. to which solder will not adhere. For use in cleaning connections before soldering, brushing out splattered solder and in repairing printed circuits.

STAINLESS STEEL WIRE BRUSHES
on steel shaft approximately 2" long overall. Can be used in a regular pin vise. **.33 net**

Prevents harmful effects of excess capillary action of solder along stranded wire beneath insulation. Order tool number by wire size being used.

*"N" Type Tweezers are made for one gauge wire only (not for a range of sizes). Therefore give better fit on wire for greater efficiency. Shorter tip hole provides for close inspection gap on precision soldering such as called for in current NASA specifications.

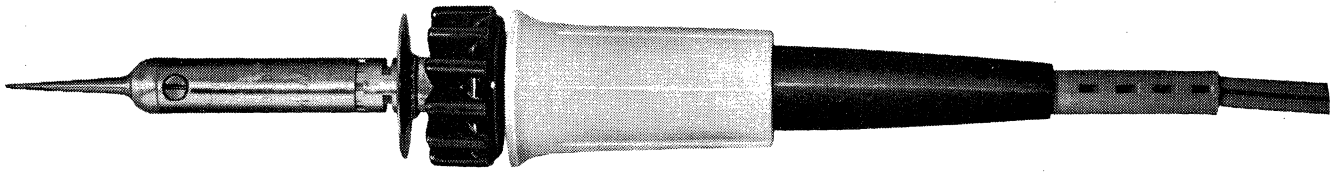
"KWIKIE" TYPE 4000



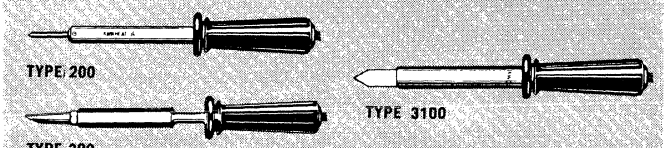
PENCIL IRONS *(Non-thermostatic)*
7 STANDARD TEMPERATURES AVAILABLE

This newest Kwikie provides unexcelled efficiency and economy with its interchangeable plug-in tips, and unparalleled versatility with its standard irons in wattages and temperatures ranging from 10 watts (450°F) through 50 watts (1000°F). This selection permits easy standardization as well as precise temperatures for exacting production requirements without added cost of transformers.

Small, (7") lightweight (1¾ oz.) and finely balanced, the new models are provided with a comfortably sized, extra-cool grip of rugged plastic, allowing their use in minimum contamination work areas (no cork). Though designed for prolonged high production precision soldering of miniature components, the Kwikie is small enough for safe fast work in densely packed circuitry with power in reserve. Engineered to melt more solder by comparison with other interchangeable tip type irons of comparable wattage.

All models available with 3 conductor safety-grounded 6' cord sets and irons in 3 smart colors . . . green, white, and black. All irons and temperatures rate at 115V.

DEPENDABLE PRODUCTION IRONS



TYPES 200 and 300-THERMOSTATIC MODELS
(Vanatta Automatic Thermostat)
Lightweight and heavy duty irons for high-speed work. Dependable and rugged. Interchangeable tips are easily replaced. Preset to 700°F for intermittent standby or to 800°F for constant high-speed soldering. Can be preset from 275° to 875° for additional charge of $1.00 each for 1 to 49 irons; 50¢ each for 50 to 99. No extra charge for 100 or more. Temperature creep reduced by the use of special alloys.

TYPE 3100-TEMPERATURE CONTROLLED MODEL
Rugged, lightweight, and economical general purpose iron for continuous or intermittent soldering. One-piece shell and heating element attached to air-cooled plastic handle by 2 screws for rapid replacement. Temperature allows wattage increase as demand increases. Forged tellurium copper core. Screw type tips easily changed or replaced.

IDEAL CUSTOM Stripmaster®

Patented No. 2,889,728

FOR PRECISION WIRE STRIPPING

Removes Teflon* and other hard-to-strip insulation. New "concentric hole" stripping blades and special design of jaws prevent damage to insulation and wires. Matched sets of blades are precision drilled on watchmaker's equipment to exact wire sizes. Chucking action on insulation guides conductor through stripping hole, preventing nicks and scrapes. 3 models, wire sizes from 10 to 30.

RESISTANCE SOLDERING TOOLS

IDEAL

Because Ideal Thermo-Tip soldering equipment uses the resistance heat principle, you can get more work done faster and safer at lower cost and still achieve higher quality, stronger, more uniform joints. Cold flow is practically impossible. High amperage, low voltage current passes through and heats work only. Burning of nearby parts, or operators, never occurs because heat is concentrated at point of contact. No setup or pre-heating is necessary. Solder adheres instantly all around, making the strongest possible joint.

A wide range of Pencil-Grip attachments are available. You select from double or single metal or carbon electrode styles to fit your soldering needs. A perforated aluminum sleeve dissipates heats and provides exceptionally cool operation. Three different power units provide from 2 to 9 heat variations. All units come equipped with a 5-ft. power cord.

ERSIN Multicore 5-CORE SOLDER WORLD'S FINEST

TECHNICAL ADVANTAGES

Ersin Flux is exclusive to Multicore and will not be found in any other solder. It is a high-grade, water white resin, homogeneously activated.

Ersin Flux has a vigorous fluxing action and possesses the non-corrosive and protective features of the original resin. Soldered joints made with Ersin Flux do not corrode, even after prolonged exposure to any degree of humidity. It has been tested under climatic conditions ranging from the Arctic to the tropics.

Ersin Flux reduces the surface tension of molten solder causing it to wet metals rapidly, increasing speed of operation with resultant production economies.

Free from objectionable odors. Non-toxic in use.

Leaves nothing but pure resin on the work after soldering and may be used whenever plain resin is specified.

Complies with all pertinent federal specifications.

Multicore construction. 5 separate cores of flux eliminate possibility of no flux in a portion of the wire, which may occur in single cored solder.

Guaranteed continuity of the flux stream prevents dry joints, i.e., those having high electrical resistance.

Although there are 5 cores of flux in Multicore, the total percentage of flux to solder is less than many single cored solders.

Very rapid melting results from the multiple core construction, which provides thinner walls of solder, than are found in same gauge single cored solder.

Multicore's unique properties make perfect joints possible on difficult metals and alloys, even if oxidized.

Ability to tin rapidly produces perfect joints with less solder. Greater coverage per pound.

Ersin Multicore Solder is non-toxic in use. Cadmium is completely eliminated. The quantity of antimony is less than government standards allow. There is no danger of harmful effects caused by such impurities.

Every package of Ersin Multicore is labelled with the exact tin/lead content. This precise labelling results from Multicore's precise manufacturing methods.

ORYX PRECISION SOLDERING INSTRUMENTS

FIVE REASONS WHY PRODUCTION MANAGERS CHOOSE ORYX SOLDERING IRONS

1. MINIATURE SIZE

ORYX soldering irons are small and easy to handle as pencils. Their miniature size helps to speed any precision soldering operation. Damage to adjacent components is eliminated. If you can see it, you can solder it with ORYX!

2. FEATHER WEIGHT

A standard, utility-type 100 watt soldering iron weighs about 2 lbs. The so-called pencil-type irons typically weigh between 2 and 6 ounces. ORYX soldering irons, by contrast, weigh as little as ¼ ounce. This true feather weight virtually eliminates hand fatigue. Workers can turn out many more joints per hour with fewer rejects.

3. HIGH EFFICIENCY

All ORYX soldering irons utilize a unique element-in-the-tip design principle. By generating the heat **within** the tip, far fewer watts are needed to achieve results comparable to much larger irons. This principle also provides quicker heat recovery because the heat path between element and joint is so very short. The need for large insulating handles is eliminated.

4. SAFETY

ORYX low-voltage irons are polarized, making it possible to directly ground the shaft, tip, and one side of the heating element. This provides a maximum degree of safety, both to the operator and to delicate circuitry. The ORYX line of 115 V. plug-in models includes 3-wire styles whose shafts and tips may be connected to ground for safety.

5. ECONOMY

A standard ORYX low-voltage industrial iron costs less than $5 in production quantities.

Weller DUAL HEAT Soldering Guns

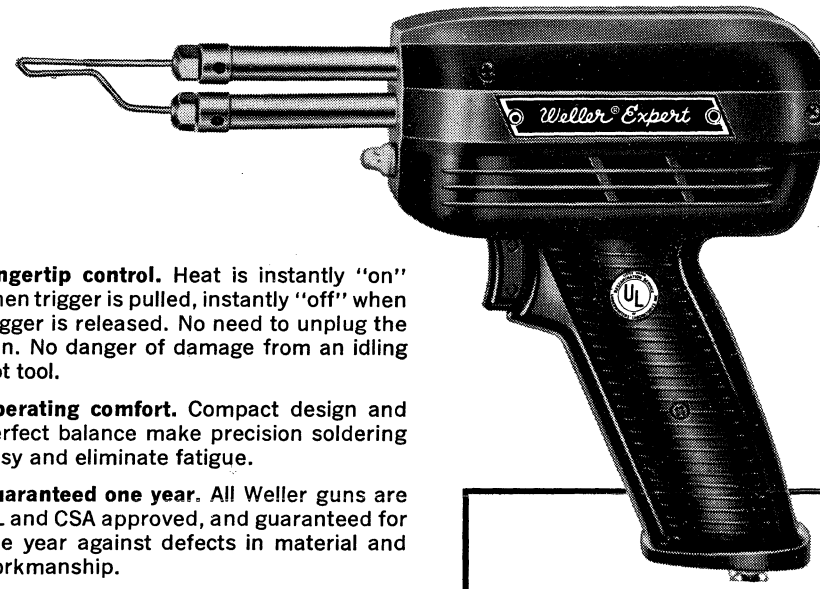
Dual heat. All Weller guns offer Dual Heat, an original Weller feature that provides two tip temperatures from the same gun. Two trigger positions permit instant switching to high or low heat, whichever is best suited for the job. The use of low heat prevents damage when soldering near heat-sensitive components and prolongs tip life. High heat is instantly available when needed.

Instant heat. Solders in seconds. No waiting for the tip to heat. No wasted current.

High-Efficiency Tip. Made of copper for superior heat transfer and optimum soldering results. Slips easily into difficult places.

Exclusive Tip Grip. Wiping action of tip fastening nuts eliminates contact resistance and oxidation. This assures full, constant heat.

Spotlight. Illuminates the work and eliminates shadows.



Fingertip control. Heat is instantly "on" when trigger is pulled, instantly "off" when trigger is released. No need to unplug the gun. No danger of damage from an idling hot tool.

Operating comfort. Compact design and perfect balance make precision soldering easy and eliminate fatigue.

Guaranteed one year. All Weller guns are UL and CSA approved, and guaranteed for one year against defects in material and workmanship.

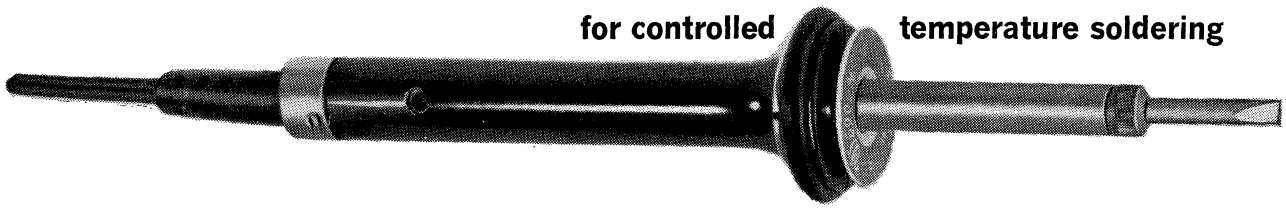
Weller MAGNASTAT® Soldering Irons

for controlled temperature soldering



Only Weller brings you soldering irons with temperature control in the tip. One Magnastat iron with 3 different controlled temperature tips does the work of 3 different irons. And it maintains proper temperature for secure, reliable soldered connections.

- Tip temperature will not vary more than ±3% when idling.
- A Magnastat iron provides efficient soldering temperature under load and excellent recovery.
- Your choice of 3 different controlled temperatures by interchanging Magnastat tips.
- Weller Magnastat irons do the work of uncontrolled irons that require much higher wattage and weigh twice as much.

"BLUE CHIP" TRANSFORMERS

62 TYPES
5 DIFFERENT SIZES

Tiny, plastic cased, Blue Chip transformers for printed circuit applications, are available for a wide choice of power ratings.

Five different sizes, from .10 to 1.2 cubic inches with a total of 62 new ratings are listed below to indicate the available power levels for both voice frequency range and extended frequency operation. These ratings take into account not only power handling capacities at minimum frequencies, but also total harmonic distortion under stated conditions. Within the limits shown on the rating charts, variations in both power and distortion levels are possible depending upon the minimum operating frequency.

Blue Chip transformers meet Mil-T-27A, Grade 5, Class S requirements. These versatile transformers are available from ADC, or through your distributor.

POWER TRANSFORMERS *FOR MILITARY AND INDUSTRIAL APPLICATIONS*

Reliability, minimum size and long life under rugged environmental conditions are prime requisites in today's military electronic equipment. To meet these modern standards, ADC offers a complete line of hermetically sealed power transformers. Designed to meet MIL-T-27A specifications and utilizing MIL cases and mounting dimensions, these units offer our customers a ready source for prototype and production applications. All military contractors and commercial electronic engineers with stringent environmental conditions will find these carefully rated units ideally suited. For those applications where hermetic sealing is not necessary, we offer the conservative transformer designs of our hermetically sealed line, in drawn steel cases of MIL size and mounting dimensions with phenolic terminal plates and solder lug terminals.

POWER TRANSFORMERS—60 Cycle

ADC offers these standard power transformer designs to cover a wide range of requirements for electronic circuit application. They are available in standard MIL case sizes, hermetically sealed to meet all requirements of MIL-T-27A, Grade 4, Class R, life expectancy X. Maximum operating altitude is 10,000 feet.

The same electrical ratings are also available as commercial grade fully enclosed units for non-military applications in the same MIL case sizes. This version is furnished with a phenolic terminal board and heavy duty solder lug terminals. Mounting screws and tapped inserts provide the same mounting centers as MIL-T-27A versions.

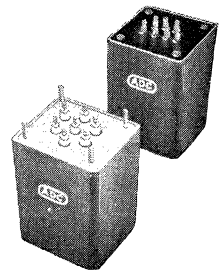
AUDIO TRANSFORMERS *FOR MILITARY AND COMMERCIAL APPLICATIONS*

ADC offers the following designs to cover a wide range of standard audio applications, from low power transistors through heavy duty output circuits. They are conservatively rated at ±½ db from 30 to 15,000 cycles at the maximum rated power. Each is designed for minimum insertion loss, is fully impregnated before potting and rated for dependable continuous duty operation.



These audio transformers are available in standard MIL cases, hermetically sealed to meet all requirements of MIL-T-27A. ADC REPEATING COILS

104A—Cord Circuit. This repeating coil is designed to have good transmission efficiency for voice frequencies. Low frequency ringing currents are attenuated and circuit will not ring through. Case is heavy steel to eliminate all crosstalk. Core will not saturate at maximum normal current.

104B—Phantom. The 104B Repeating Coil is a 4-winding coil, for use in phantom circuits. The phantom winding (5-6-7-8) is parallel wound. Heavy Formvar wire is used for maximum surge voltage or lightning protection. This coil has good transmission efficiency at both ringing and voice frequencies.

INDUCTION COILS

103A—Induction Coil is a 2-winding coil for local battery telephones.

103B—Anti-Sidetone Induction Coil is similar to 103A, but with an additional winding for anti-sidetone connection.

103C—Anti-Sidetone Induction Coil is designed for common battery telephone use.

PROFESSIONAL GRADE COMPONENTS

This group of components has been designed for use in high fidelity and professional equipment and for public address service. Freed has developed this series of units employing the latest design techniques and the best commercially available materials. Except for units carrying unbalanced direct current the frequency response is ± 1 DB from 30 to 15,000 cps. All units feature excellent performance characteristics with minimum size and weight.

All units are vacuum varnished and then potted in compound to insure long life and trouble free performance.

Professional Grade components are supplied cased. Upon request these units can be supplied open or in shell type construction.

All cased Professional Grade Components supplied with terminals meet "EIA" standards.

Transformers PGA 1 through PGA 10 are supplied in hermetically sealed cases.

HERMETICALLY SEALED PULSE TRANSFORMERS

Hermetically sealed Pulse Transformers for use in blocking oscillator, low level interstage coupling, and modulator output circuits. These components meet MIL-T-27 A specifications. The pulse transformers are designed for maximum power, efficiency, and optimum pulse performance. Balanced coil structures permit series or parallel connection of windings for turn ratios other than unity. Pulse characteristics, voltages and impedance levels will depend upon the interconnections made.

HERMETICALLY SEALED, MIL-T-27A, GRADE 5, CLASS S FILTER REACTORS

These reactors have a split winding for series or parallel connections.

When using two sections in parallel, double the Idc. Both inductance and resistance are divided by 4.

TOROIDAL INDUCTORS

Using the latest developments in the field of magnetic materials and new impregnation and molding techniques the Freed Transformer Co. makes available to the industry the most extensive line of toroidal inductors.

Freed toroids are available in three types of constructions. Open units coated with a special high temperature extremely low loss compound, hermetically sealed in metal cases or molded in special **Freed Epoxy Resin.** Both hermetically sealed and molded units meet the latest military specification MIL-T-27A(graded 1 or 4 and 2 or 5 respectively.)Freed toroidal inductors are supplied with either molypermalloy or carbonyl iron powder cores

1. Temperature Stabilization:

The molypermalloy and carbonyl iron powder cores have a temperature coefficient of inductance. Depending on the degree of temperature stabilization the cores have different temperature coefficients. The degree of stabilization is denoted by a two-letter code.

SF Non-stabilized cores, ±2½% inductance variations from —55°C to +85°C.
SN Non-stabilized cores, +2% inductance variations from —55°C to +85°C.
SE Temperature stabilized cores, +0.1% to —0.4% inductance variations from —1.5°C to +54°C.
SB Temperature stabilized cores, ±0.1% inductance variations from +13°C to +35°C.
SD Temperature stabilized cores, ±0.1% inductance variations from —1.5°C to +54°C.
SW Temperature stabilized cores, ±0.25% inductance variations from —54°C to +85°C.
SM Temperature stabilized cores, ±.25% —65°C to +125°C.
SP Temperature stable carbonyl iron cores, ±0.3% inductance variations from —55°C to +85°C.

The temperature (stabilization) coefficient of an inductor will depend upon the nominal inductance value, operating frequency and A.C. voltage across the coil. Under some unfavorable working conditions the temperature coefficient of inductance corresponding to a given stability characteristic may be exceeded.

Toroids with special requirements such as tapped toroids, toroidal transformers, molded and cased units with dimensions other than standard sizes and high temperature toroids can be supplied on request. Our engineering and laboratory facilities are available for consultation, research and development.

FREED TRANSFORMER CO., INC.

MAGNETIC AMPLIFIERS AND SATURABLE TRANSFORMERS

The ever increasing demand for reliability, ruggedness, miniaturization and high performance has made the magnetic amplifier an indispensable component of many military and industrial automatic control and servo systems. Recent advances in materials and techniques permit an ever greater utilization of the well-known inherent advantages of magnetic amplifiers such as direct operation from line voltage, no warm-up time, long life components, ease of signal mixing and hermetic sealing.

Freed Transformer Co. manufactures an extensive line of magnetic amplifiers, ranging from saturable transformers to half-wave type, fast-response servo amplifiers. Choice of catalog amplifiers assures standardization, lowest possible cost and rapid delivery.

All standard units are designed for continuous operation and will operate in an ambient temperature range of —55°C to +75°C.

In addition to standard items, Freed Transformer Co. has extensive facilities for the design and production of special amplifiers, saturable reactors and magnetic components.

ALL ITEMS LISTED ARE AVAILABLE FROM STOCK.

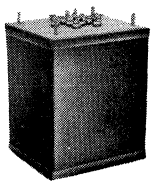
TRANSISTOR CONVERTERS



THE FREED LINE OF DC TO AC AND DC TO DC TRANSISTOR CONVERTERS PROVIDE A HIGH EFFICIENCY VOLTAGE CONVERSION FROM BATTERY SOURCES TO AN AC LINE VOLTAGE OR HIGH DC VOLTAGE WITHOUT THE USE OF MOVING PARTS.

Freed Transformer Co. maintains a stock line of reliable, highly efficient static DC to DC and DC to AC converters. DC to DC converters in hermetically sealed cans. RF filters included inside case.

The MAC Line of Static DC to AC Converters provide a highly efficient voltage conversion from battery sources to AC voltage without the use of moving parts.

The output voltage and/or frequency is directly proportional to source voltage variation.

Special regulators can be supplied to compensate for this variation.

- **RUGGED, QUIET, MAINTENANCE FREE, LONG LIFE OPERATION.**
- **HIGH POWER TO WEIGHT RATIO, ARC-FREE OPERATION.**

DC TO DC CONVERTERS

All TDC units are Hermetically Sealed, Oil Filled. Mtg. base plate must be mounted on a sink of sufficient area to maintain a base temperature of 70°C. Maximum output regulation 5% from half load to full load. Ripple frequency 4 to 5 KC; Ripple content 0.1%.

TELEMETERING COMPONENTS

A complete line of Band Pass Filters, Low Pass Filters and Discriminators is available for multi-channel telemetering applications. These components cover the frequency range from 400 cps to 70,000 cps. The filters feature **exceptional phase linearity,** excellent selectivity characteristics and plug-in construction. The Discriminators, either fixed or slug tuned, have exceptional linearity, high amplification, and utmost stability.

TELEMETERING BAND PASS FILTERS

Hermetically sealed to MIL-T-27A and MIL-F-18327

These filters cover the frequencies from 400 c.p.s. to 70KC. Narrow frequency B.P.F. have a band width of ±9¾% of center frequency and 45 DB (minimum) points at ±7½% of center frequency of higher or lower adjacent channels. Wide frequency B.P.F. have a band width of ±19½% of center frequency and 50 D.B. points at ±15% of center frequencies of higher or lower second adjacent channels.

FREED FILTERS

To MIL-T-27A and MIL-F-18327

Freed Standard Filters are **Hermetically Sealed Miniature and Sub-Miniature** high performance components designed for both production and laboratory applications in the Communications and Electronic industry. In order to achieve attenuation requirements not obtainable with one single filter, one can combine several standard filters of different transmission characteristics. Wide Band Pass characteristics are obtainable by combining low and high Pass Units. The astatic construction of inductive components together with special shielding reduces the hum pick-up of the standard filters.

The standard filters are available in Low Pass, High Pass and Band Pass Filters.

Low Pass Filters: The attenuation characteristics of Low Pass Filters are 6db or less at cut-off frequency, 35db or more at 1.5 cut-off frequency and 40db or more at 2 cut-off frequency.

ILP Interstage Low Pass Filter. Characteristic Impedance 10,000 ohms, in and out.

LLP Line Low Pass Filter. Characteristic Impedance 500 to 600 Ω, in and out.

High Pass Filters: The attenuation characteristics of High Pass Filters are 6db or less at cut-off frequency, 35db and 40db or more at 0.67 and 0.5 cut-off frequency.

IHP Interstage High Pass Filter. Characteristic Impedance 10,000 ohms, in and out.

LHP Line High Pass Filter. Characteristic Impedance 500 to 600 Ω, in and out.

Band Pass Filters: The attenuation characteristics of Band Pass Filters are 2db or less at plus or minus 3% of center frequency 40db or more at 0.5 and 2 center frequency.

IBP Interstage Band Pass Filter. Nominal input impedance—10,000 ohms. Nominal output impedance 5 megohms or grid of vacuum tube. Effective voltage step-up 2:1. (Output voltage to source voltage.)

LBP Line Band Pass Filter. Nominal input impedance 500 to 600 ohms. Nominal output impedance 5 megohms or grid of vacuum tube. Effective voltage step-up 1. (Output voltage to source voltage.)

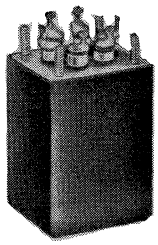
SERIES 1950 NULL "T" FILTERS



The Freed Series 1950 Null T networks consist of two resistance capacitance networks, whose outputs completely cancel each other at the balance frequency. They may be used as rejection networks particularly at low frequencies where LC filters become excessively large and unstable.

Standard models are available for 30, 60 and 120 cycles in a wide range of impedances. Each network will give a minimum of 50 db attenuation at the null frequency.

The null frequency is adjusted to a tolerance of ±2%.

All Null T Filters are hermetically sealed.

Prices on request.

NEW EXCLUSIVE FEATURES

The volt-pac design incorporates many important new features which provide new levels of performance for users. Significant among these are the heat-sink ring, quick-transfer current collector, and grain-oriented solid-carbon brush. These three exclusive features help increase the load capacity of present core sizes as much as 33 percent. The ability to pack more capacity in less volume is of vital importance in many applications where space is very limited.

(1) Brush design, with solid-carbon brush, eliminates carbon-to-metal soldering, keeps brush temperature down by lowering resistance to load currents

(2) Quick transfer current collector increases performance and reliability by eliminating hidden contact surfaces and providing a direct low-resistance past for load current

(3) New unique heat-sink ring located beneath the gold-plated brush track quickly dissipates heat from the hot spot

Data sheets for all types on request.

Frequency range on most of these units is contained within 100 kc to 100 mc band except for the 1702 and 1901 which cover from 20 kc to 8 mc. Data sheets with individual curves are available upon request.

North Hills wideband transformers have been designed for low insertion loss (less than 1 db) and good matching characteristics over wide frequency ranges. Balanced windings feature extremely low unbalanced voltages and have a center tap. Complete specifications are available upon request.

Several case styles are offered. Series AA models are potted in metal cases with a terminal board on the bottom and two 6-32 spade mounting bolts. Series BA are hermetically sealed with glass terminals at the case ends and two 4-40 studs on the bottom for mounting. Series BB is similar to BA except that the unbalanced connection is provided by a BNC connector. The above three styles are rated at 2 watts and the GA and the FA package are rated at ½ watt. Both GA and FA packages are hermetically sealed. Note that the types AA, BA and BB feature lower cut-off frequency than that of type GA and FA because of the larger core dimensions.

"V.T." VARIABLE TRANSFORMERS

Toroidal core type autotransformers providing distortion-free continuously adjustable voltage from fixed AC input. Highly advanced Ohmite design. Sizeable bonus in current available in all units where output greater than line volts ("overvoltage") is not required ("N" suffix); "LN" suffix indicates low input (40V max.) and very high current output: positive current transfer achieved with direct brush to slip spring shunt. **Mounting:** VT2 panel mounting by ⅜-32 bushing; VT2 tandem units by ¼-20 bolts; all VT4 and VT8 types panel or table mounting by ¼-20 bolts; VT20, VT20B, panel or table mounting by four ⅜" dia. bolts or three ⅜-24 bolts. Shafts of VT4, VT8, VT20 units slide to brush or base side. Units not cased except where indicated. Over-all dimensions include shaft. Suffixes "-2" and "-3" indicate number of units in tandem assembly (shipped with connection instructions).

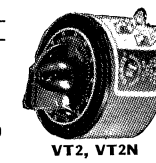
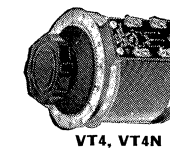
MOTOR MODULE PACKAGE

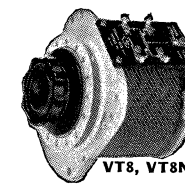
For VT4, VT8 or VT20, single or ganged, unenclosed models. Attaches in 15 minutes with everyday tools. Five speeds in stock for VT4 and VT8. Four speeds for VT20. **Call your distributor or the factory.**



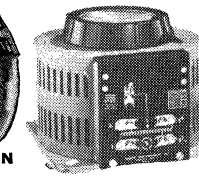
VT2, VT2N



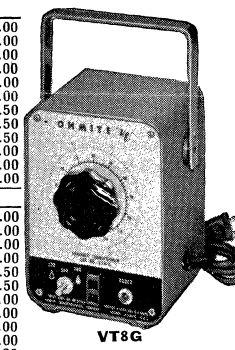
VT4, VT4N



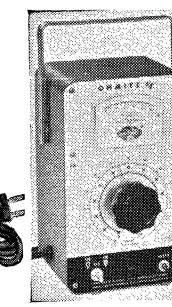
VT8, VT8N



VT20B



VT8G



VT8GCV

[1] Frequency shown is a minimum—units may be used to well over 400 cps.

[2] VT8H and VT8HN also have taps for 120V input with 280V output for VT8H and 240V output for VT8HN. With use of 120V input the max. current rating applies up to 120V output but reduces to approx. 50% at max output voltage.

[3] Connected at factory for overvoltage output —easily reconnected by user for no-over voltage output. On VT8G and VT20G, switc selects overvoltage or no-overvoltage.

[4] User wires for desired output. Dial normall calibrated for overvoltage.

[5] Tandem assemblies normally furnished with out interconnection between units.

[6] When transformers are series connected load cannot be grounded.

[7] Includes knob and dial and mounting hard ware.

[8] May be used at 50 cps if connected for n overvoltage output.

[9] Overvoltage connection must not be used.

[10] Specify 240 volt dial if desired, except VT series.

* Add ⅞" for knob thickness.

† Add 1" for knob thickness.

‡ Add 1¼" for knob thickness.

MODULATION TRANSFORMERS — THE "FIVE" SERIES

SNC universal modulation transformers are specifically designed to provide maximum application possibilities per type. All units are provided with two identical secondary windings, permitting series or parrallel operation. Changes in the ratio can be readily accomplished, when desired, without removing the unit from the chassis. Most units available in either air cooled or compound filled cases.

FILAMENT TRANSFORMERS — THE "FOUR" SERIES

Most SNC Filament Transformers are constructed to provide two identical center tapped secondary windings and offer a minimum of three applications. They provide three-fold the number of possible applications of ordinary filament types. A few are single secondary units and are so designed. All have 117 V. 50/60 cycle primary.

CV Transformers

AUTOMATIC, INSTANTANEOUS VOLTAGE REGULATION FOR A WIDE VARIETY OF ELECTRIC AND ELECTRONIC DEVICES

Constant-voltage Sola transformers provide a stabilized output voltage even though the input voltage varies over a considerable range. Their applications are numerous and varied. CV's are especially ideal for high-accuracy requirements such as in computers and data-processing equipment.

Another advantage in CV transformers is their ability to prolong the life of electronic components by eliminating injurious over- and under-voltages. The Sola transformer's current-limiting factor protects semiconductors and other components from excessive inrush and fault currents.

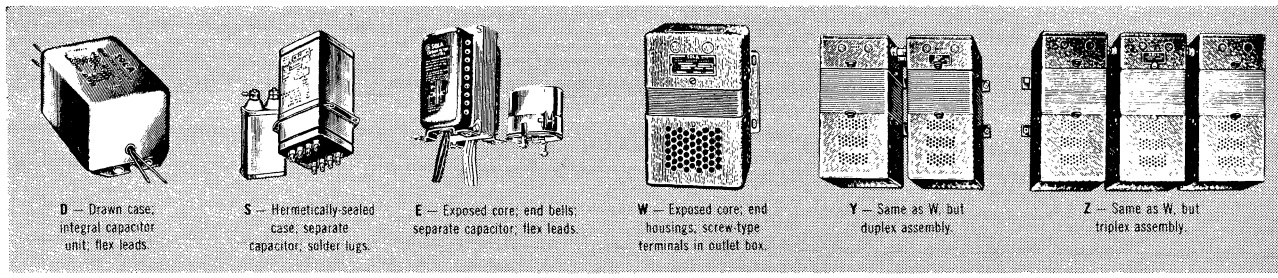
*Mechanical Structures

"STRUCTURE CODE" LETTER REFERS TO ONE OF THESE GENERAL TYPES OF MECHANICAL ASSEMBLIES:



D — Drawn case; integral capacitor unit; flex leads.

S — Hermetically-sealed case; separate capacitor; solder lugs.

E — Exposed core; end bells; separate capacitor; flex leads.

W — Exposed core; end housings; screw-type terminals in outlet box.

Y — Same as W, but duplex assembly.

Z — Same as W, but triplex assembly.

Cord/Receptacle Adapter Kits

Adapter kits may be used when the convenience of input plug and output receptacle is preferred to the standard arrangement of terminals in the transformer housing. See accompanying chart.

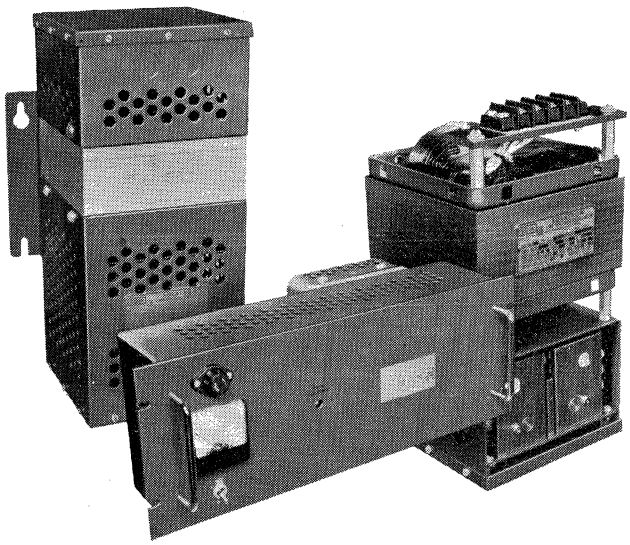
NEW compact 1-kva SOLATRON VOLTAGE REGULATOR

(static-magnetic principle)



The new 1-kva Solatron is designed for use as an OEM component, or for applications where size and weight are critical factors. One-fourth the size, one-third the weight of previous Solatron models — yet it provides closer regulation and lower harmonic distortion.

The new compact Solatron is available in three separate versions: external mounting, rack-panel mounting, and open core-and-coil for component installation. A wide range of styles ranging from .5 kva upwards are available in these three styles, in controlling fluctuation ranges of ±10%, ±20% and +10%, −20%. For complete information on the compact Solatron regulator, please write for bulletin No. VR-200.

MOST COMPLETE LINE IN THE INDUSTRY

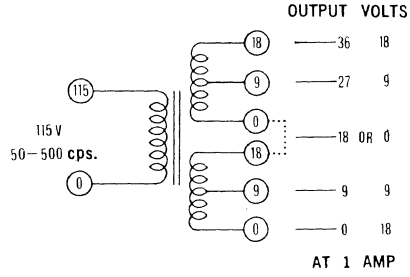
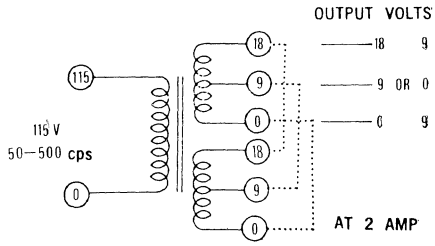
HIGH CURRENT TRANSFORMERS & CHOKES

ALL ITEMS AVAILABLE IMMEDIATELY FROM STOCK

SERIES CONNECTED SECONDARIES



PARALLEL CONNECTED SECONDARIES

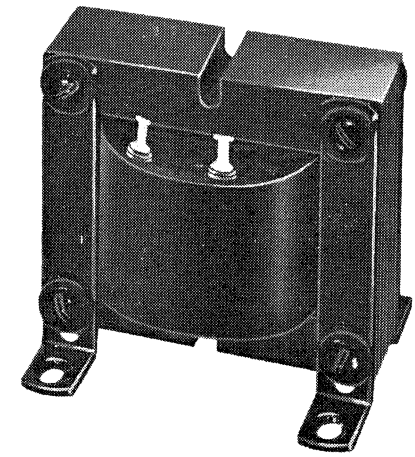


The line is designed conservatively for a max of 50° C rise above ambient, for use on 115V power line from 50-500 cps. Only prime raw materials are used. Units are thoroughly impregnated and baked with Signal's own high gloss black baking varnish. The transformers and chokes are rugged in construction, well-insulated, and have a consistently uniform appearance. All ratings are at full load current continuous operation.

Electrical ratings have been chosen to cover a wide range of applications. All transformers have two center-tapped secondary windings. This is indicated on the schematic diagram below.

It is possible to make connections for many different voltage and current combinations. A number of possible applications are illustrated in the diagrams to the left. It should be noted that Part No. 36-1 is used in these specific examples. Since the user can choose from a line having 12.8, 24, 36, 56, 68, 80, 160 or 230 volt output with current ratings from ½ to 100 amperes, it is apparent that an almost limitless number of combinations can be selected.

If you should have any questions regarding these or any of the possible combinations which may occur to you, our engineering staff will be pleased to furnish prompt answers.

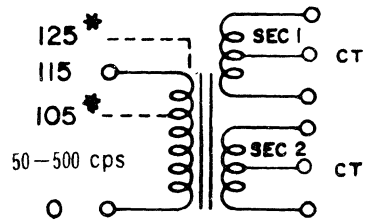


METHOD OF DETERMINING SECONDARY CURRENT RATING

Since our transformers may be used in many possible configurations, the current shown is rms secondary winding current. Secondary current ratings are rms ac values, NOT dc values. When selecting the "Secondary Amp" rating, the conversion chart at the right should be used.

RECTIFIER TYPE	FILTER TYPE	SECONDARY CURREN
Full Wave Center-Tap	Choke Input	.7 times DC currer
Full Wave Center-Tap	Capacitor Input	1.2 times DC currer
Full Wave Bridge	Choke Input	Equal to DC currer
Full Wave Bridge	Capacitor Input	1.8 times DC currer

SCHEMATIC DIAGRAM



*Taps are standard on higher current units, consult chart above.

MW ±1/8 (SLOTTED HOLE IN BRACKET)
NOTE: Increase L, W, H by 1/4 inch on all encapsulated units. ML, MW remain fixed.

HIGH CURRENT CHOKES

Signal's line of High Current Chokes is designed to complement the selection of rectifier transformers, so that a set may be specified for power supplies using choke input filters.

Inductance ratings are minimum guaranteed at full rated dc current. Resistances are maximum values.

Special variations or intermediate values of inductance, current, or resistance can be supplied promptly and accurately.

At higher power loads (above 2-3 KVA) it becomes inefficient to use single phase 115 or 230 volt standard lines. With this in mind, our engineering staff has developed a line of 3 phase transformers for use off 208 or 220V 3 phase power lines. These offer the significantly higher conversion efficiency and lighter power line drain of 3 phase systems.

Since the principal application of these items is in high power dc power supplies, output ratings are given in dc voltage and current assuming the use of a 3 phase full wave rectifier.

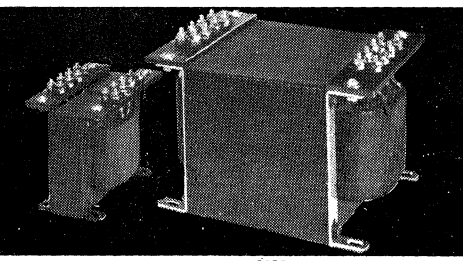
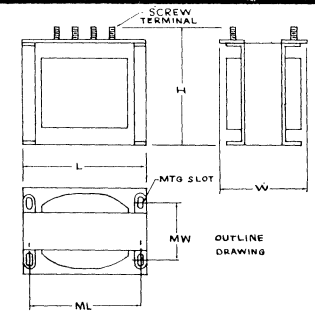
POWER ISOLATION OR AUTO-TRANSFORMERS
HIGH DEGREE OF VERSATILITY OFFERS MANY POSSIBLE VOLTAGE RATINGS



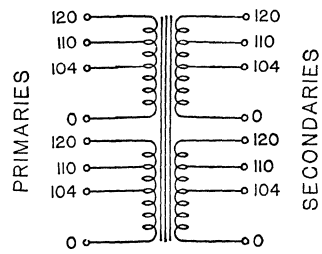
AVAILABLE FROM STOCK FOR IMMEDIATE SHIPMENT

The "DU" and "UP" lines are designed for a maximum of 55°C rise above ambient, for use on standard power lines from 50 to 500 Cps. Only prime raw materials are used. Units are thoroughly impregnated and baked with Signal's own high gloss black baking varnish. The transformers are rugged in construction, well-insulated, and have a consistently uniform appearance. All ratings are at full load current, continuous operation.

Heavy ¼ inch phenolic terminal boards are provided with plated brass screws and flat washers. Connections can be easily made with a nut driver. It is also simple to alter the inter-connections to change transformer ratings.



"DU SERIES" 110/220 Dual Primary To 110/220 Dual Sec.



As shown on the schematic diagram the "DU" line is designed with dual primaries and secondaries. All four windings are identically rated at 0/104/110/120 volts. This permits series or parallel connections on either primary or secondary. Therefore, a nominal 110 to 110 volt, 220 to 220 volt, 110 to 220 volt, or 220 to 110 volt transformer can be set up. The winding taps permit intermediate series ratings such as 208, 214, or 230 volts.

It is also possible to make auto-transformer connections by connecting a primary group in series with a secondary group. Such nominal ratings as 440 to 220 volts or 220 to 440 volts can be set-up, in addition to the standard ratings described above. A further advantage to auto-transformer connection is the fact that the KVA rating of a particular type is **doubled.**

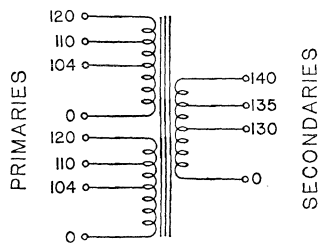
"UP SERIES" 110/220 Dual Primary To 0/130/135/140 V. Sec.



The "UP" line utilizes the same dual primary as the "DU" line. It has, however, a single secondary rated at 0/130/135/140 volts.

This type is quite useful to boost low line voltages or raise line voltages to compensate for drops in series elements. It also finds application in bridge rectifiers for DC voltage outputs of approximately 115 to 130 volts.

SIGNALS CUSTOM SERVICE

Many of our customers do not realize that the major portion of our shipments consists of "special" or "custom" items.

Usually, the final application of one of our stock transformers does not require the full number of taps or windings provided. These naturally are part of the cost of the item. If we are advised as to the specific taps used as to what intermediate voltage or current required we can begin production quickly on t variation of our stock item. If we define prod tion quantities as roughly over 25 pieces, customer will do better price-wise on his cust made item than on the standard.

SILICON RECTIFIER POWER TRANSFORMERS

COMMERCIAL GRADE

Combination plate and filament power transformers bridge the gap between low voltage, high current output for use with transistor power amplifiers and the lower range of plate voltages used with electronic tubes. Two 6.3 v. filament windings, on each unit supply heater power for tubes or low voltage DC for many applications when used with suitable rectifier. Mtg. type C. Size: 4 5/16" × 3 5/8" × 4 1/4".

SPECIAL POWER TRANSFORMERS

POWER TRANSFORMERS AND FILTER REACTORS

Three types of construction are available: Hermetically sealed, semi-sealed, and compound sealed. All units have high grade magnet wire coils wound on non-aging, silicon steel cores. Core and coil are vacuum-impregnated with varnish and baked at high temperatures to achieve a vibration-proof unit. Housed in seamless, drawn-steel cases and sealed with a special moisture-resistant compound. Hermetically sealed units, H-Type meet the rigid standards of Grade 4, MIL-T-27A specifications for Class R operation. One-piece steel covers are bonded by deep-seal soldering. Semi-sealed units, S-Type have steel base covers fitted with phenolic terminal boards, numbered solder lugs. Compound-sealed units, C-type, have fiber-board covers and 10" color-coded leads.

DP SERIES

(manufactured to **MIL T 27A**)

On this page are listed units designed for the extremes in miniaturization. The 4 inch #28 color coded leads (DP-F type) supplied, are suitable for dip soldering in printed circuits. The M type use rugged terminals (.032 dia.) which assure easy plug-in and positive location. Finished in polished epoxy case.

Thorough baking and resin impregnation assure reliable life. Insulating materials used are compatible for later epoxy potting of complete assemblies. Highest efficiency — space factor obtained by use of high permeability Nickel-Alloy Cores, Nylon Bobbins, Formvar Wire. Available from stock.

TRANSISTOR POWER MODULE TRANSFORMERS — 7K SERIES

PRIMARY 115V, 50/60 CYCLES (Tapped for dual secondary voltages) The chart below shows the secondary voltages available and the approximate DC voltages which result in typical silicon rectifier circuits (at MIL currents shown). Primary taps can modify nom. AC voltages by −6%, ±6%, and ±12%. Since the capacitor following the rectifier affects the DC voltage, values used (in 1000 mfd) are shown, in parenthesis ( ), after each current rating. *Nom. AC and DC volts are at 115 volt input . . . primary taps can modify −6%, ±6%, and ±12%. 50/60 CPS

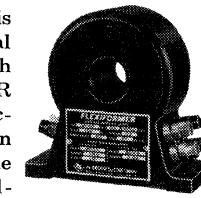
FLEXIFORMER® Packaged Transformer Primary



TYPE TP150

This "do-it-yourself" transformer is essentially a self-contained toroidal primary coil encased in durable high impact plastic. Colored SUPERIOR 5-WAY Binding Posts for connections are integrally mounted. When used as a source of a-c voltage, the center opening permits hand-threading the correct number of secondary winding turns to obtain the desired output voltage. When used as a current transformer, the FLEXIFORMER winding is shunted by an ammeter which indicates the current flow in a conductor hand-threaded through the center opening.

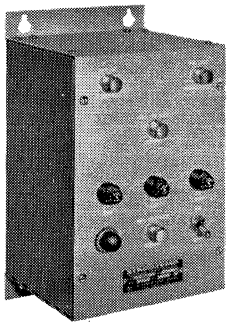
STABILTEMP Proportioning Temperature Coupler



TYPE PTC5

Automatically maintains voltage required to keep electric furnaces and ovens at correct temperature when incorporated into control systems using most commercially available current proportioning temperature controllers. Designed for use with cataloged motor-driven POWERSTAT Variable Transformers rated for 120 or 240 volt, 50/60 cycle single phase service. For three phase operation, the unit can be used to monitor one line-to-neutral or one line-to-line voltage depending on POWERSTAT used. To maintain the desired temperature a STABILTEMP will regulate the voltage at any point within the range of the POWERSTAT as determined by the controller current command signal regardless of variations in line voltage or load current. STABILTEMP type PTC5 is designed for 5 milliamperes maximum command signal; shunting resistors must be provided by user for 20 or 50 milliampere command signals.

SOLIDSTAT® Variable Voltage Controls

Solid-state, semiconductor type variable a-c voltage controls for all loads from unity power factor to zero power factor lagging inductive load. Can be controlled by small indicating potentiometer, current feedback sensing or voltage sensing circuits. For 60 cycle service.

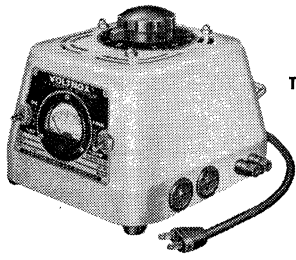
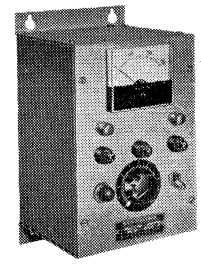
VOLTBOX® A-C Power Supply



TYPE UC1M

Compact versatile instrument containing all the necessary components for tests involving a-c voltage: POWERSTAT Variable Transformer, direct reading voltmeter, three output receptacles; two SUPERIOR 5-WAY Binding Posts, "on-off" switch, line-load meter switches, fuse and 6-foot cord-plug. Designed for 50/60 cycle service. Type UC1M ratings are 120 volt input and 0-140 volt, 7.5 ampere, 1.0 KVA output; type UC2M ratings are 240 volt input and 0-280 volt, 3 ampere, 0.84 KVA output. Other types available on special order.

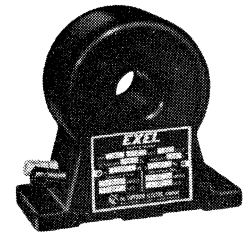
STABILINE® Full Range Regulator Controller



TYPE FR500MP

Designed for use with motor-driven POWERSTAT Variable Transformers to maintain constant output voltage, adjustable to any value within the full range of the POWERSTAT used. Can regulate output voltage from any motor-driven POWERSTAT rated for 120 or 240 volt, 50/60 cycle single phase duty. Depending on the POWERSTAT used, the unit may be used for three phase applications to maintain one line-to-neutral or one line-to-line voltage. It can also be used in 480 volt, 50/60 cycle, three phase applications but an auxiliary step-down transformer is required when sensing line-to-line voltage. Output voltage will remain within a 2 volt band when used with 120 volt POWERSTATS and within a 4 volt band when used with 240 volt types. Has 0-300 voltmeter mounted on front panel to monitor POWERSTAT output voltage.

EXEL Loading Reactor



TYPE LR2

Designed to provide a convenient inductive load which can be made adjustable when used with a POWERSTAT Variable Transformer. Used primarily for testing apparatus at various lagging power factor loads, i.e. to simulate an inductive load. Ratings: 120 volts, 60 cycles; 2.0 amperes at 120 volts; inductive reactance 60 ohms; d-c resistance 4.0 ohms; inductance 0.16 henrys. At 60 cycles, the EXEL has essentially a linear current curve from 0 to nominal 2.0 amperes for continuous duty and up to 3.0 amperes for intermittent duty.

This series of high current transformers and chokes are most widely used for high power rectifier and high current A.C. applications. It is one of the industries most popular items. All types are designed for a nominal temperature rise of 45°C at full load and will easily withstand unusual overloads. The regulation is extremely low, varying from 5% on the smallest unit to 1% on the largest. All units have name plates and wiring diagrams for installation ease, future reference and permanent identification.

Five constructional types are available for maximum flexibility for use in either the laboratory or production.

HORIZONTAL BRACKET MOUNT (STYLE B) is an "open" unit, double vacuum varnish impregnated to insure long life and give maximum protection against humidity.

EPOXY UNITS (STYLE BE) are electrically and mechanically identical to style B and are vacuum encapsulated to withstand environmental conditions per MIL-T-27B, Grade 5, Class S.

SHELL ENCLOSED (STYLE V) offers excellent mechanical protection to the coil. This is in addition to functional appearance and the ease of "wiring with leads." Double vacuum varnish impregnation further assures adequate moisture protection and long life.

CAN ENCLOSED (STYLE C) units are ruggedly constructed and embedded in a rigid potting compound to insure maximum heat transfer. Professional Todd finish enhances any chassis.

HERMETICALLY SEALED (STYLE CM) units are manufactured to MIL-T-27B, Grade S to withstand the most rigorous environmental conditions.

Printed Circuit -Open Frame -Transistor

300 Milliwatt

MOUNTING PCT-3 WEIGHT .08 LBS.

INCLUDES: (A) INPUT, (J) INTERSTAGE, (L) LINE TO TRANSISTOR, (S) OUTPUT.

This new line of printed circuit transformers has been developed to fill the gap between the wire-in units and the molded-printed circuit type transistor transformers. The lug numbers on the schematic to the right corresponds to the lug numbers on the PCT & PCT-3 drawings. Windings with no taps will have lugs #2 and #5 blank.

The high performance characteristics such as frequency response, high permeability lamination, and low insertion losses equal those of the more costly hermetically sealed units. The mounting type of the units appearing in the second column under "Part No." are as listed in the last column on the page, while the otherwise identical units listed in the first column are mounted by means of an octal plug-in socket

Inverters-DC to AC

Recent developments in the power transistor field have made possible the design or circuits which are efficient and rugged converters of low voltage DC to high voltage AC or DC power. These transistorized power supplies are ideally suited for powering all kinds of battery operated equipment such as mobile communication systems, aircraft and marine navigational systems, photoflash, ultrasonic applications and even 117V 60 CPS from an automobile battery so as to operate 117V radio, television, electric shavers, etc. These transistor power supply transformers give a wide range of voltage and power to choose from. Complete instructions supplied with each transformer.

Designed and built to meet MIL-T-27B Grade 4, Class R specifications. Rugged construction, exceptional reliability, high power rating — all have been maintained in the design of these units. Provided with non-insulated .017 diameter, 1 1/4" long, gold plated lead wire, these units may be welded or soldered in the circuitry. Standardized with the semiconductor industry, the leads are spaced on a .2" diameter circle. These units can be used for different impedances than shown, the impedance ratio being constant. Useable frequency range is 200 to 20,000 Cycles. The dimensions shown in the RAV-5 drawing are optimum.

Audio Inductors

Designed and built to provide a full range of inductance and current ratings in epoxy molded, encased, and encapsulated units from .06 Hy. to 450 Hy. at tolerances of less than ± 5%. Units marked * have a tolerance ± 3% and a Q of 22 or more at approximately 1,000 cycles. Units marked # have an inductance tolerance of ± 2% and a Q of 25 or more at 1,700 cycles for low inductance units and 400 cycles for high inductance units. Stable operation is provided from .1 to 30 volts and over the full MIL temperature range.

Alignaire Inductors-Variable

These Alignaire Inductors are ideally suited for hard to align or frequently changed circuits such as low frequency oscillators, attenuators, low frequency tuned amplifiers, filters and delay lines. The high frequency and temperature stability built into these units make them most applicable to mid-audio tuned frequency circuits.

Provided in a wide range of inductance values, these units require only a simple screw driver adjustment to achieve the exact inductance required for the circuit. Less than three turns of the alignment screw are necessary to move the internal piston through its complete range.

Internal construction of the AL-3 units is similar to the AL-1 and AL-2 but have an allen alignment screw on the side of the case.

Multi Shielded-Line Isolation

50/60 CYCLES

These Multi-shielded line isolation transformers have been specifically designed for critical circuitry where minimum coupling capacity is imperative and battery-type isolation is desired. 27V47, 27V48, 27V49 are vacuum potted with epoxy resin in standard MIL-T-27 cases and have less than .03 MMFD capacity coupling between windings. Other units in YY cases have coupling capacitance of less than .1 MMFD. 27V43 is for 400 cycle operation only.

Band Pass Filters

These units have been designed and built to meet MIL-F-18327B for their specific class of operation and are high performance units applicable to production or laboratory communication and electronic equipment. They have been carefully adjusted to the specified frequencies with proper input and output impedances.
Output impedances indicated as "To Grid" should be terminated in a open grid circuit. Tapped outputs — marked (*) — provide for either 10,000 ohm transistor termination or high impedance grid termination.

Hybrid Circuit Output

The circuit shown at the right is a typical "Patch" hybrid circuit using two 22S51 transformers.

This circuit is ideally suited for use in duplex radio communications where two way communication to and from a remote point is desired. It may also be adopted to operate sound distribution systems or speech amplifier and modulator for transmission from remote point. The output from a radio receiver may then be connected to the transformer marked T2 so that the received signal may be transmitted (through the 500 ohm line) to the remote point.

Molded And Plastic Coated Toroid Inductors

These high Q Toroid inductors have the highest inductive stability available to the industry. Each coil has an inductance tolerance of plus or minus 2%. Available in either plastic coated units with leads, (TOR 800 and TOR 900 series) or in epoxy molded MIL-T-27B encapsulation (TOR 700 and TOR 7100 and up).

Multi-Tapped-Low Voltage Rectifier

SELENIUM OR SILICON RECTIFIERS
PRIMARY 117 VOLT 50/60 CYCLES

Each Selenium Rectifier Transformer listed in this section has terminal numbering and winding arrangement as shown in schematics. Primary connections are made to terminals 1, 2, 3, 4, 5, 6 and 7. The winding connected to terminals 5, 6 and 7 is a separate isolated primary winding, designed for the purpose of extending the voltage range of the transformer. This is accomplished by connecting the winding in series aiding or in series bucking with terminals 2, 3 or 4. Two identical secondary windings are connected to terminals 8 and 9 and to 10 and 11. Complete connection data supplied with each unit.

Multi-Purpose 1:1:1:1 Isolation Control

50/60 CYCLES

This series has four isolated windings with seven possible combinations: for step-up, step-down, and isolation applications in industrial, home or laboratory use. They are particulasy well adapted to 220-volt line step-down to provide 115-volt power source to operate machine tools and other automated equipment.

Isolation Transformers

50/60 CYCLES

Isolation control transformers provide 115 Volts power or lighting within machine tools or other automated equipment from various line voltages from 115 Volts to 600 Volts. They also permit direct grounded lighting systems or control circuits independent of power distribution grounds for greater operator safety. For complete specifications of 400 Cycle isolation transformers refer to the green section of this catalog.

INDOOR — SINGLE PHASE — DOUBLE WOUND — 50/60 CYCLES
D-1 MOUNTING.

DRY TYPE GENERAL PURPOSE TRANSFORMERS are supplied in either double winding isolation or single winding auto-transformer types for 50/60 CPS applications. Either type may be used single phase or connected in a group of three for three phase. All units are Class B insulation for 80°C rise except the units marked (§) Class A for 55°C rise.
CASE AND JUNCTION BOX. A stamped steel case encloses the entire coil assembly and presents an attractive appearance. The junction box is an integrated part of the case and provides easy access and wiring to the individually marked primary and secondary leads. Knock outs are provided on the junction box for attaching conduit or bushings.
WIRING DIAGRAMS AND INSTRUCTIONS are furnished with each unit. On the inside of the junction box cover, a decal shows the schematic diagram and ratings of each transformer.
APPLICATIONS
1. To provide 120 Volt Lighting or 120/240 Volt Power from 240-480-600 Volt distribution circuits.
2. To insulate or isolate lighting circuits from power circuits allowing the use of grounded or ungrounded circuits independent of power or other lighting circuit grounds.
3. The auto-transformers provide a smaller and more economical method of voltage changing. These auto-transformers may be used to obtain 120 Volts from a 240 Volt circuit, to establish a neutral ground from a 240 Volt circuit, or to balance the 120/240 Volt loading on a three phase line to obtain lower demand billing by the utility company.

CHOPPER INPUT TRANSFORMERS

Triad Chopper Input Transformers provide exceedingly close balance between the two halves of the primary winding . . . minimum noise in microvolt ranges of input signals is assured with Triad's special core treatment techniques. For demanding transistor and tube applications, Triad's special design capabilities have an outstanding record. For special applications, consult Triad.

Sub-miniature Encapsulated TOROIDAL INDUCTORS

Triad sub-miniature toroidal inductors, designed for quick, easy printed-circuit board mounting, are now stocked for immediate delivery in a range of standard ratings from 50 micro-henries to 500 milli-henries. Many uses, especially in airborne telemetering applications incorporating Triad's sub-miniature filters FL-384 through FL-388. Case size of units is 7/16 inch diameter by 1/4 inch high. Providing an optimum combination of high Q and extremely small-size, this series is ideal for printed board, transistor or vacuum tube application.

Triad sub-miniature inductors are toroidally wound on permalloy powdered cores. Encapsulated in high temperature epoxy resin. Weldable or solderable leads of gold plated nickel alloy. Highly resistant to severe acceleration, shock or vibration. Manufactured to MIL-T-27A, Grade 5 Class S (MIL type TF5SX20ZZ).

NOTE: Ma. DC maximum is for approximately 5% drop in inductance. Those figures marked * will give less than 5% inductance drop but should not be exceeded under operating conditions.

Inductance tolerance of EX-P05A through EX-P50A is ±5%; EX-001A through EX-500A is ±2%.

PIP* SERIES TRANSISTOR PULSE TRANSFORMERS

UTC's PIP series of subminiature transistor type pulse transformers is designed to give a maximum of component density in equipments, their configuration being especially compatible with transistors. The design is based on the UTC DO-T and DI-T series to impart exceptional reliability. PIP-1 through PIP-9 have a ratio of 4:4:1, PIP-10 through PIP-12 have a ratio of 5:3:1. All units are checked and adjusted in a transistor test circuit to give the required pulse width.

Hermetically sealed, manufactured & guaranteed to MIL-T-20138B by full environmental testing . . . all units, completely METAL CASED, MIL type TP6RX4410CZ. See UTC page 6 for other miniature pulse transformers.

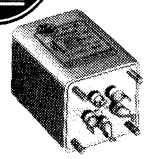
TRANSISTOR SUPPLY TRANSFORMERS



Primary 115V. 50/60 cycles (tapped on H-143 thru H-146 for dual secondary voltages). DC ratings are approximate, based on silicon bridge rectifier (except H-141, H-142 also shown F.W.CT.). Choke input DCV is based on 10% voltage drop in choke. Condenser value, C, is in 1000 mfd. H-141, H-142, H-147 listing under "Secs in parallel" is single winding. All units MIL type TF4RX02.

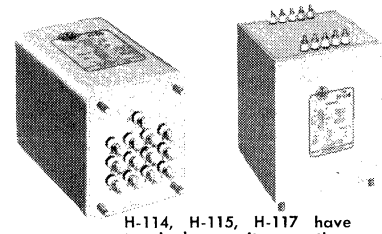
HERMETIC SEALED POWER and PLATE TRANSFORMERS



H-114, H-115, H-117 have terminals opposite mounting.

Power transformers: primary 115V, 60 cycles suited to 50*-1000 cycles service. Plate transformers: primary 105/115/210/220 volts, 50/60 cycles. "L" ratings are choke input . . . "C" ratings are condenser input. H-80 thru H-197 MIL type TF4RX03, H-110 thru H-117 MIL type TF4RX02. The tapped high voltage winding provides either of two secondary voltages for greatest versatility. The power transformer listings indicate DC voltages and permissible currents for both choke and condenser input filters, as well as for military and industrial applications.

"W" suffix units designed for full wave center tap and full wave bridge application. Center tap of secondary may be disconnected from ground.

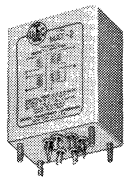
MAT* MAGNETIC AMPLIFIERS FOR SERVO MOTOR APPLICATIONS

VACUUM TUBE TYPE



The MAT 1-4 Magnetic Amplifiers are exceptionally stable units designed for the control of 2 phase, 115V., 400 cycle servo motors. They are compact . . . hermetically sealed . . . maanetically shielded . . . and meet MIL-T-27B and MIL-E-5400 Specifications. The output is sinusoidal, amplitude variable, and phase reversible. Control is provided by a dual triode such as 12AU7 operating with a plate voltage of 115 volts, 400 cycles, or higher. The signal to the triode grids can be polarity reversible DC or phase reversible 400 cycles with or without suppressed carrier modulation. These units eliminate DC power requirements as well as temperature sensitive dry disc rectifiers. The high input impedance provides minimum loading on sensing elements and high power gain. Ringing at low load level has been reduced to a minimum through high internal damping factors. The power output figures are conservative . . . power gain of the *Magnetic Structure* is approximately 40 . . . response time approximately 7.5 milliseconds. The maximum null voltage is 3 volts RMS. For single phase supply voltage the load capacitor should effect 90° phase shift with motor load . . . for 3 phase, 30° phase shift.

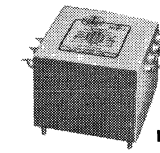
ULTRASHIELDED POWER-LINE ISOLATION TRANSFORMERS

Simllates battery operation for critical circuits requiring extreme isolation from power line.



HIT*

Designed to give the ultimate in isolation, for line-powered equipment, which formerly could only be obtained from battery power. The effective capacity coupling between primary and secondary windings is less than 0.1 MMFD. For this purpose shields are individually terminated to allow maximum flexibility. Input and output terminals are brought out on opposite sides of a special housing in order to maintain the excellent isolation between line and load.

PRECISION MINIATURE WIDE APPLICATION PULSE TRANSFORMERS

UTC miniature, wound core, pulse transformers are individually precision adjusted in standard test circuits to close tolerances. They are high reliability units, hermetically sealed by vacuum molding and suited for service from −70° C. to +130° C. Wound core structure provides excellent temperature stability (unlike ferrite). Designs are high inductance type to provide minimum of droop and assure true pulse width. H-45 thru H-57 ratio 1:1:1. H-60 thru H-69 ratio 4:4:1. Others ratio 5:3:1.

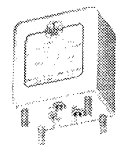
BM & LM Series



HM Series

INTERSTAGE AND LINE FILTERS

Available in stock frequencies listed below (numerical part of type number is cutoff frequency in cps). Compact shielded cases hermetically sealed to MIL-T-27B specs. BMI, LMI, BML cases: 1 3/16" x 1 11/16" x 1 5/8" h.; wt., 6 oz. HMI, HML, LML cases: 1 3/16" x 1 11/16" x 2 1/2" h.; wt., 9 oz. The BMI filters are band pass interstage units designed to operate between a vacuum tube plate (or 10,000 ohms) and a grid. They provide a gain of 2 at center frequency. BTI units are same as BMI, but 10,000 ohms output.

BML band pass filters, similarly, work into a grid, but have an input impedance of 500/600 ohms. They provide a gain of 9.

HMI filters are high pass interstage units.

LMI filters are low pass interstage units.

HML filter are high pass with input and output impedance of 500/600 ohms.

LML filters are low pass filters with input and output impedance of 500/600 ohms.

LLP low frequency low pass filter, loss of less than 40 db at 20 cycles. Source & load 100K ohms.

BPM  **MINIFILTERS*** HPM & LPM

These units provide almost the same characteristics as the standard interstage units listed to the left, although extremely miniaturized. Hermetically sealed to MIL-T-27B specs. B type case: ¾" x ¾" x 1 1/8" h.; wt., 1 oz. H and L cases: 1" x 1" x 1 3/8" h.; wt., 2¼ oz. Cutoff frequencies in cps indicated by type number.

TMW filters are down less than 3 db at ± 15% of center frequency. They are down more than 20 db at ± 50% of center frequency. Attenuation is greater than 40 db beyond 2.5 Fc and .4 Fc.

MNF and MWF (Minifilter) provide same performance as filters described above but are extremely miniaturized. Slanted toward use with transistors. Pin terminals ideally suited for printed circuits.

HIGH Q PRECISION INDUCTANCE DECADE

Invaluable instruments for design and experimental work with tuned circuits, wave filters, and equalizers. The low hum pickup toroid coils employ a new permalloy dust core which, combined with special winding methods, provides very high Q, excellent voltage and temperature stability, and high self resonance frequency. The inductance values are laboratory adjusted to better than 1% precision, with calibration noted on base.

HIGH Q TOROID INDUCTORS

Favorites for over fifteen years, UTC HQ Toroids are only excelled by the preferred new "M" series. As typical Q curves show, HQ coils are available for application from 100 cycles to 100 KC. Adjusted to 1%, the inductance is virtually independent of frequency, temperature, and vibration. Voltage stability is excellent, and shielding case assures 80 db coupling attenuation. Hermetically to MIL-T-27B. All units MIL type TF4RX-20YY.

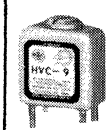
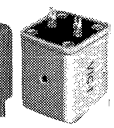
VARIDUCTORS



HVC & HVV



VIC

These variable inductors are ideal for use in tuned circuits, equalizers, oscillators, etc. TYPE HVC:—Gives highest Q and stability; adjustable −70% to +200% of mean value. Hermetically sealed to MIL-T-27B.

HVV Types: For precise matching; vernier inductance variation ±10% of nominal value. Offer high Q over a wide frequency range and high temperature stability.

VIC:—Adjustable −45% to +85% of mean value.

Size: HVC, TVC and HVV types, 1 1/8" lg. x 25/32" w. x 1 7/32" h.; weight 2 oz. VIC type, 1 11/32" lg. x 1 1/4" w. x 1 1/16" h.; weight 5 1/2 oz. HVC, TVC, U.S. Pat. No. 2,879,489; HVV, Pat. Pend.

TVC type inductors are identical to HVC units, but provide taps at 30% and 50% of total turns — ideal for oscillator circuits, etc. HVC & TVC, U. S. Pat. No. 2,879,489

HIPERMALLOY* TRANSFORMERS

Hipermalloy audio and power transformers are specifically designed for portable and compact service. High fidelity though light in weight and dependable. The frequency characteristic of the Hipermalloy audio units is uniform from 30 to 20,000 cycles. They incorporate a Hipermalloy nickel iron core and hum balanced coil structure. The rugged die cast case is of high conductivity alloy finished in grey, arranged for mounting with the terminals either up or down. DC in Primary shown is maximum unbalanced.

PLATE TRANSFORMERS

Primaries for 105, 115, 220, 230 volts; 50/60 cycles. For reduced power, secondary can be cut in half, using 220 v. primary on 110 volts; may be used on 25 to 43 cycles in this case. "W" suffix units designed for full wave center tap and full wave bridge application. Center tap may be disconnected from ground.

UTC SSO-#P and SO-#P units are ideal miniaturized components having high efficiency and wide frequency response. Special nickel iron core materials and winding methods provide exceptional performance and reliability.

These units are vacuum molded to MIL Grade 5. They employ 50 mil deeply anchored pin terminals ideally suited for printed circuit and transistor application. Terminals are strong enough to support these light weight units.

The UTC SML-70 is an ultra miniature transformer providing high shielding, extremely low insertion loss with wide band response, 200 cycles to 20 kc. These units are provided with pin terminals (.025 dia.) strong enough to support the unit and are ideal for printed circuits.

LINE VOLTAGE ADJUSTERS WITH METER (FIG. G SEE PG. 11)

The perfect answer to abnormal or fluctuating line voltage. Adjust switch so that meter reads at red line and you know that your equipment is working at correct voltage. These units combine a tapped auto-transformer with a switch and meter in a compact, rugged assembly. The nine tap switch provides for line voltage of 60 to 140 volts on 115 volt output models and 160 to 240 volts on 230 volt output model. All units are designed for 50/60 cycles service and come complete with 6 foot input cord and plug and outlet receptacle.

SIGNALLING AND CONTROL TRANSFORMERS (FIG. H SEE PG. 11)

Primary 110-120 volts, 50/60 cycles—Secondary
4/8/12/16/20/24 volts

High power transformers suitable for operating relays, sirens horns, gongs, etc. from 115 V. 50/60 cycle line. These units have four secondary terminals providing 4, 8, 12, 16, 20 and 24 volt output. The volt ampere rating is based on the 24 volt secondary tap with corresponding reduction at the lower voltages. Underwriters' approved primary leads are employed, and screw-type binding posts.

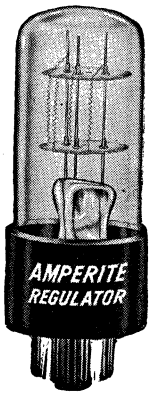
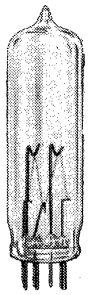
AUTOMATIC AMPERITE REGULATOR

BALLAST TUBE FOR AUTOMATIC REGULATION OF CURRENT AND VOLTAGE



STANDARD



MINIATURE

AUTOMATIC REGULATION

WHAT IT IS

The *AMPERITE Ballast-Regulating Tube* is an automatic *"rheostat"* designed to keep the current in a circuit at a definite value, for example, 0.5 amp.

Should the supply voltage increase, the *Amperite* will automatically increase in resistance enough to take up the increase in supply voltage — keeping the voltage on the load constant. It consists of an iron wire *hermetically sealed* in a bulb containing *hydrogen* or *helium* — the two gases with the *highest heat conductivity*. Its regulating action is based on the high temperature co-efficient of resistance of the iron wire and the rapid cooling of *hydrogen* or *helium* gas.

Being a constant current device, the *AMPERITE Ballast-Regulating Tube* can be used only to regulate a constant load—fixed wattage. Thermostatic relays can sometimes be included in these regulators to reduce initial surge.

We strongly recommend that you send us your specifications on special problems, and let us recommend the BALLAST TUBE you need.

AMPERITE NEON LAMP
TYPE NE70V Net $1.80

GENERAL ADVANTAGES:

• Light, compact • No moving parts • Rugged; will withstand vibration of 10G. minimum • Hermetically sealed; not affected by altitude or humidity changes • Can be changed as easily as a radio tube • Operates equally well on A.C. or D.C. • Inexpensive

CAPACITIES AVAILABLE

Current values of 60 ma. to 5 amps; threshold voltage 0.4 to 40 V. Maximum dissipation per AMPERITE 50w per tube (ST19 bulb). Any number of AMPERITES with the same voltage range can be operated in parallel. AMPERITES should not be used in series.

AGEING

AMPERITE Ballast Tubes may change approximately up to 3% in current if aged for 4 to 8 hours, at maximum voltage. They will change very little thereafter.

LIFE EXPECTANCY

Average life if operated as recommended ..... **2000 Hours**
If operated continuously at maximum voltage ..... **1000 Hours**
If operated continuously at 80% maximum voltage ..... **5000 Hours**
If filament is operated below glow point ..... **5000 Hours up**

In operation, the *Amperite* filament starts to glow at one point; as the voltage is increased, the glow spreads over the entire filament. Like incandescent lamps, turning *Amperite* on and off reduces its life, especially if operating near its maximum voltage.

TIME LAG CHARACTERISTICS

Time lag encountered in an *Amperite Ballast Tube* depends upon the wattage consumed by the ballast and the size of the bulb. Where the wattage is small for the size of the bulb, the action can be made practically instantaneous — less than 1 second. In such cases the bulb will remain at practically ambient temperature. When the wattage is high enough to heat the bulb to a temperature uncomfortable to the hand (160°F) the lag might be as much as several minutes for final readings—but normally reaches within 90% of final readings within a few seconds.

AMPERITE NUMBERING SYSTEM

In general, the AMPERITE number approximately denotes the current—voltage threshold value. For example:

Amperite Number	3-4	3H4	10-7	12-11	12H11
Threshold Current	0.3	0.35	1.0	1.2	1.25
Threshold Voltage	4.0	4.0	7.0	11.0	11.0

We strongly recommend that you send us your specifications on special problems, and let us recommend the BALLAST TUBE you need.

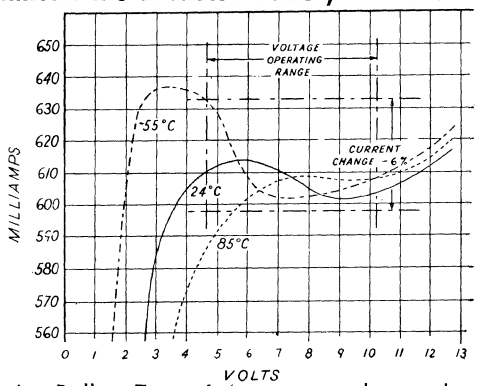
AUTOMATIC AMPERITE REGULATOR

BALLAST TUBE FOR AUTOMATIC REGULATION OF CURRENT AND VOLTAGE

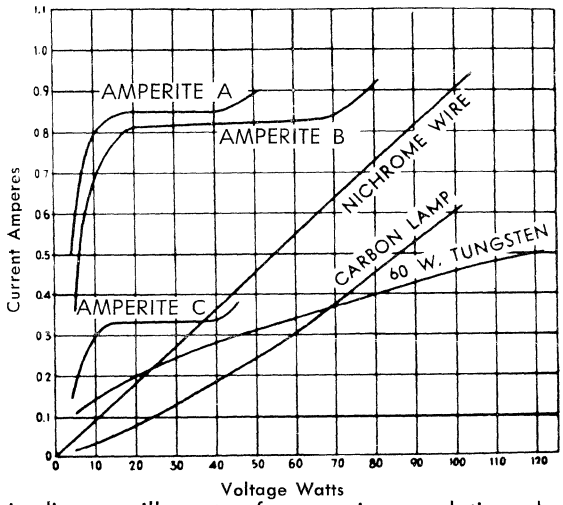
AMBIENT EFFECTS

Ambient temperature variation of −50° to +70° C will change the current value of an *Amperite* approximately 2% on regulating portion of curve as shown directly below. Being hermetically sealed the *Amperite* is not affected by altitude or humidity changes.

We strongly recommend that you send us your specifications on special problems, and let us recommend the BALLAST TUBE you need.



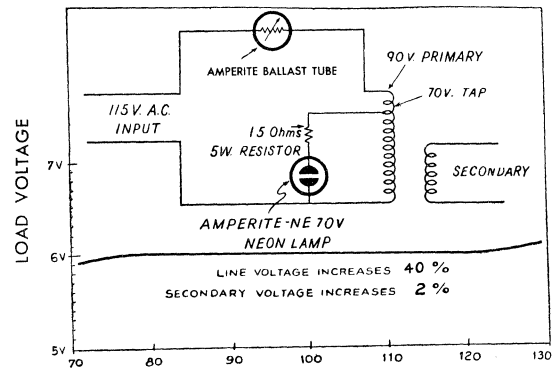
Amperite Ballast-Type 6-4 current voltage characteristic under ambient conditions of −55°, 24°, and 85° C. The percentage change with ambient is approximately the same with all type *Amperite* ballasts.



This diagram illustrates far superior regulating characteristics of the *Amperite* Ballast-Regulating Tube. ***STANDARD SIZES available for various wattage consumption . . . For good regulation, a bulb should not be required to dissipate more than 50% of maximum wattage.***

BATTERY CHARGING AND DISCHARGING

Amperite Ballast Tubes are very successfully used for keeping the current constant in charging and discharging batteries. Any number of *Amperites* of the same voltage range can be placed in parallel to obtain proper current. The current can be kept to ± 1%. Advise voltage variation and currents desired.



A light, compact, and inexpensive method of obtaining close regulation is to use an *Amperite Ballast Tube* with an *Amperite* Neon Lamp — type NE70V. Base octal-base wiring prongs 2-5. One NE70V is used for all loads up to 100W

POWER SUPPLIES

We strongly recommend, for any particular application, to fill in and return one of our special problem sheets (ASP 343) and permit us to recommend the most suitable AMPERITE.

POWER SUPPLY	Dry Cells	6 Volts	12 Volts	26 Volts	115 Volts
Supply Variation	2.2-3.0V	5.5-7.5V	11.4-13.8V	22.0-30.0V	105-125V
Desired on Load	1.8-2.0V	3.9-4.1V	6.1- 6.4V	12.4-12.8V	90- 95V
Required on AMPERITE	0.4-1.0V	1.6-3.4V	5.3- 7.4V	9.6-19.2V	15- 30V
Current Variation	.29-.32a	.29-.32a	.29- .32a	.29- .32a	29-.32a

The above chart shows the maximum load voltage for the give supply to obtain ± 2% current regulation on load. Better regulatio is obtainable by increasing the voltage across the AMPERITI Up to a point, the higher the percentage of the supply voltage take up by the AMPERITE, the better the regulation.

Radio tube filament loads — have low cold resistance which caus a high initial surge. For such loads we recommend a bleeder of 2 to 50% prox. of load and the corresponding AMPERITE. e.

FILAMENT LOAD	USE AMPERITE	TOTAL CURRENT
0.3a	4HTF4	0.45a
0.6a	8-4	0.8a
0.7a	9H4	0.95a

On Radio tube filament loads the bleeder will also improve the regulatic

General Electric TV picture tubes feature many multipurpose designs that replace several of the most commonly used types. Each SG type replaces a number of other types, as shown in the tables.

All material and parts used in the manufacture of General Electric picture tubes are new except for the envelope (and screen and aperture mask assembly in the case of color tubes) which, prior to re-use, have been inspected and tested to meet our high quality standards.

Penta vacuum switches are single-pole, double-throw switches enclosed in evacuated glass envelopes. They are ideal for use wherever compact, fast-acting relays are required to switch high-voltage circuits under a wide range of ambient atmospheric conditions, including explosive atmospheres, and in other applications where exposed-contact relays would be unsuitable.

These vacuum switches are operated by external actuating coils, which are excited by direct current and designed so that the soft-iron pole piece and the armature assembly enclosed in the envelope act to complete the magnetic circuit.

FLAT BRAID

DESCRIPTION: A woven braid, composed of tinned copper strands, which is rolled flat at time of manufacture to a specific width depending upon construction.

APPLICATIONS: Flat braid is usually employed for its current carrying capacity and its extreme flexibility. It is generally used as a high current conductor at low voltages. Battery grounding is typical of this application. It is also used as a bonding strap in vehicles and aircraft to help eliminate ignition interference. Because of its extreme flexibility it can be used in confined areas or as electrical connections on moving parts.

OVAL COMMERCIAL BRAID

DESCRIPTION: A woven tinned copper braid which is left in the tubular configuration as it leaves the braiding equipment. It is manufactured to a specific inside diameter but because of its extreme flexibility cannot maintain its completely round shape and becomes oval.

APPLICATIONS: Oval braid is used as an electrostatic shield to cover a conductor, a series of conductors, a cable, or other components. It is specifically constructed and left in its tubular or oval form so that it can easily be slipped over wire, cable, or other components for which shielding is required.

APPLICATIONS

Alphlex® PVC-105 Plastic Tubing is designed and manufactured specifically for electronic, aircraft and electrical applications involving temperatures as high as 105°C. It conforms to Specification MIL-I-631C, Type F, Form U, Grade C, Class I, Category I.

DESCRIPTION

PVC-105's exceptional integration of desirable qualities endows it with excellent versatility and durability. Its dielectric strength is high and remains unaffected by increasing temperature throughout its range. It displays high resistance to the agents of heat, oil, chemicals, corrosion, fungi and even abrasion with no loss in tensile strength, non-flammability—or flexibility.

Under all the above adverse conditions, PVC-105 will retain its ability to hug and protect irregular-shaped objects, will "snake" beautifully, and will always be easy to handle.

To achieve this combination of advantages, special care is taken in the making of PVC-105. It is compounded with only first-grade quality non-migratory resinous type plasticizers. From laboratory to production line, from raw material to finished product, strict quality control prevails. Behind it are the same engineering and production know-how that have made the name Alpha famous in the electronics industry.

As with all Alpha and Alphlex items, PVC-105 is "IN STOCK" for immediate delivery, and can be supplied to desired lengths as well as standard spools.

For your special problems, please call on us for consultation and recommendations—no obligation, of course.

TEFLON® EXTRUDED TUBING (TFT-200)
(THIN WALL)

DESCRIPTION

ALPHLEX® THIN WALL TEFLON TUBING, a high temperature insulation (designated by A.I.E.E. for continuous operation at 220°C minimum), while classified as a thermoplastic resin, does not melt and flow as do conventional thermoplastic materials.

APPLICATIONS

Because of its combination of electrical, chemical and mechanical properties, **ALPHLEX TEFLON** is unmatched by any other type tubing for use in electrical applications at high frequencies and temperatures. As a thin, flexible insulation, it permits miniaturization and compactness of design heretofore impossible.

TYPES OF LACING CORD

flat braided tape This construction was develo to prevent the "cold flow" that often is encounte in wire having plastic or rubber insulations. It been specifically designed to create a wider con area with the insulation, so that it does not away from the contact point. It is considerably n flexible and easier on the user's hands and is rec mended for all types of harness work. Flat t do not appreciatively increase the diameter the cable.

BELDFOIL†† *The Total Shield*

Since Belden introduced Beldfoil in 1957, this 100% shield has won the reputation as "The Total Shield."

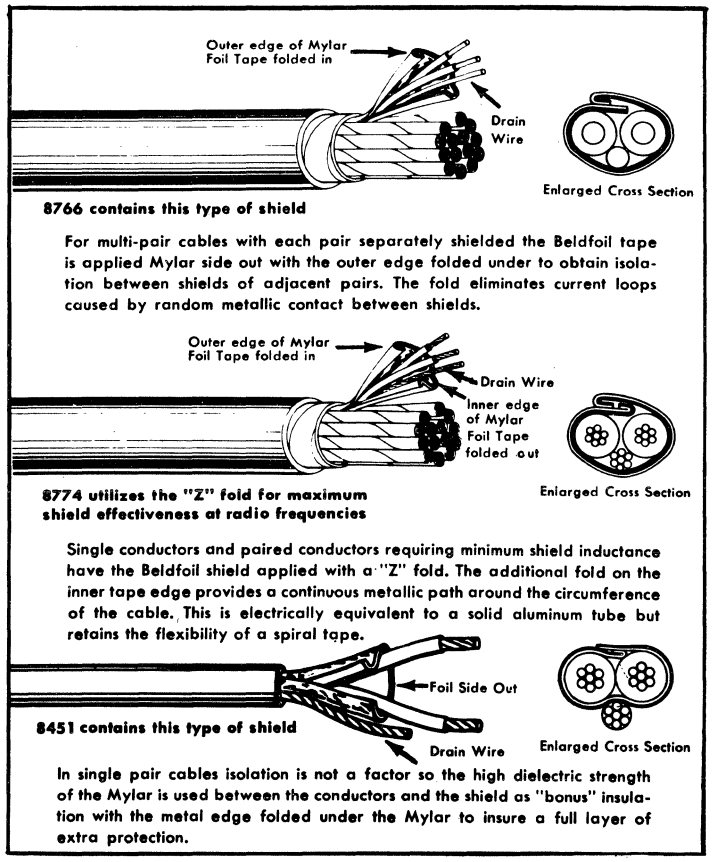
For critically sensitive circuit applications the combination of 100% shield coverage and the exclusive Belden fold (U.S. Patent 3,032,604) proves superior to previously available shields in guarding against cross talk and spurious signal impulses.

The benefits of Beldfoil include:

1) Increased electrical integrity.
2) Reduction of cross talk to unmeasurable levels.
3) Reduced weight and space requirements.
4) Easier and faster shield terminations.
5) Reduced costs.

The basic Beldfoil tape is .00035" thick rolled aluminum foil per ASTM B373-61T laminated to a .0005" thick sheet of high dielectric strength DuPont Mylar♦ per MIL-I-631D, Type G, Form F, by means of a high strength color code adhesive for circuit identification.

The exclusive Belden fold is used in several ways to give added value to the cable:



8766 contains this type of shield

For multi-pair cables with each pair separately shielded the Beldfoil tape is applied Mylar side out with the outer edge folded under to obtain isolation between shields of adjacent pairs. The fold eliminates current loops caused by random metallic contact between shields.

8774 utilizes the "Z" fold for maximum shield effectiveness at radio frequencies

Single conductors and paired conductors requiring minimum shield inductance have the Beldfoil shield applied with a "Z" fold. The additional fold on the inner tape edge provides a continuous metallic path around the circumference of the cable. This is electrically equivalent to a solid aluminum tube but retains the flexibility of a spiral tape.

8451 contains this type of shield

In single pair cables isolation is not a factor so the high dielectric strength of the Mylar is used between the conductors and the shield as "bonus" insulation with the metal edge folded under the Mylar to insure a full layer of extra protection.

All Beldfoil shields include a drain wire for ease of termination. This drain wire is in intimate contact with the foil throughout the length of the cable.

unshielded paired sound cables | **Belden**

MULTIPLE PAIR UNSHIELDED SOUND CABLES

TYPICAL APPLICATIONS: Balanced line sound systems.

Made with 80°C vinyl plastic compounds for high dielectric strength and the best physical properties, such as free stripping, small diameter, and tear resistance. It also resists the effects of water, sun, oil, grease, and ozone. The conductors are paired with a short-lay twist for conductor balance, providing a quiet circuit, free from cross talk.

RUBBER—PLASTIC—NEOPRENE

PLASTIC CABLES RECOMMENDED FOR: Lower capacitance, lower loss, greater ozone and oil resistance, lighter weight, smaller diameter.
RUBBER CABLES RECOMMENDED FOR: Greater abrasion and impact resistance, and extra limpness so cable will lie flat on stage or studio floor.
NEOPRENE CABLES RECOMMENDED FOR: Outside use, cold weather applications. Resistant to effects of sun, oil, and ozone.

	PERMOHM Encapsulated twin lead for strong, clear signals on all channels despite salt spray, industrial contamination, rain, ice and fringe area reception. An excellent color, UHF or VHF cable. **First choice for all weather, all channel T.V. reception**							
Celluline★★ 8275 *Copperweld; 2 conductors parallel, polyethylene jacket with inert gas filled unicellular polyethylene core.*	20 (7x28)	Brown	.300 x .400	80%	4.6	100 200 300 400 500 700 900	1.05 1.64 2.12 2.5 2.98 3.62 4.3	50, 75, 100 coils in counter dispenser 250, 500 1000 spools
	CELLULINE Maintains uniform electrical characteristics by eliminating all possible moisture between conductors. Installation is easier as no end-sealing is necessary. Losses are lower because of its lower dielectric constant (1.5). *The thick outer wall of brown polyethylene protects the cable from abrasion and sun damage, and the round shape offers less wind resistance. The result is a longer lasting, more efficient line which helps maintain a strong UHF or VHF reception for black and white or color.*

RG/U COAXIAL CABLES

Belden's RG/U cables are manufactured and laboratory tested in accordance with existing military specifications. These cables combine low capacitance and low attenuation. The virgin polyethylene insulation assures constant electrical characteristics regardless of changes in frequency or temperature.

A variety of available jacket types include abrasion resistant polyethylene, polyvinylchloride (recommended for chemical and weather resistance) and a special non-contaminating vinyl compounded for applications above 3000 megacycles.

Typical applications: Flexible test leads, patch cords and high voltage leads (consult applicable Mil Spec for dielectric rating of individual RG/U types). Excellent for audio applications.

Note: Maximum temperature rating of polyethylene is 80°C (176°F). The polyethylene insulation begins to soften above this temperature.

Manufactured to current Government specifications and subsequent revisions.

SWEEP TESTING

For satisfactory transmission of a signal through a cable at any frequency, Belden Sweep Tests every length of its Community TV Cables at all channels in the VHF Frequency range on an oscilloscope.

Sweep Testing, performed by trained technicians using the most modern equipment, prevents unsatisfactory program reception due to imperfections in the cable acting as "Filter Traps" at some frequencies.

The black polyethylene jackets on Belden numbers 8211, 8212, 8213, 8215, 8232, and 8233 are manufactured with a noncontaminating, nonmigratory compound specially formulated for superior weather resistance.

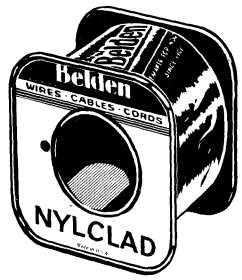
magnet wire
mobile communications cable
for marine and automotive



Nylclad magnet wire combines the most desirable features of Formvar with the well-known toughness and solvent resistance of Nylon enamel.

For difficult and exacting windings, these plus values may represent the difference between low and high rejections.

Nylclad will out-perform all other A.I.E.E., Class A, film-coated wires with respect to: (1) ability to withstand winding abuse and forming operations; (2) resistance to the solvent action of insulating varnishes and all types of thinners; (3) resistance to softening at elevated temperatures; (4) solvent crazing; (5) windability.

NEW THIN WALL BIRFLON T-500 TEFLON* SPAGHETTI TUBING

Birflon T-500 Tubing is extruded from DuPont Tetrafluoroethylene Resin. Used in electronic and electrical equipment for connection of components. Its flexibility, ease of handling has established it as the best and most popular insulation sheathing. This high temperature Class C insulation does not melt and flow as the conventional thermoplastic materials. Birflon T-500 Teflon has unique electrical, chemical and mechanical properties unmatched by any other type tubing for use in applications requiring high frequencies and high temperatures. Because of Teflon's continuous service temperature of 250° C., which is more than 100° C. above other materials, the soldering technique is simplified since "Teflon" is not harmed by the hot barrel of the soldering iron — therefore, the assembly of aircraft, missile and electronic communication equipment is greatly speeded up. Thin Wall flexible Teflon Tubing can be processed easily into flexible and rigid printed circuits. As a thin, flexible insulation, it permits miniaturization and compactness of design never before possible.

BIRNBACH HEAT SHRINK POLYVINYL CHLORIDE PLASTIC TUBING
NEW ALL PURPOSE TUBING WITH CONTROLLED SHRINKAGE

Series SK265 covers heat shrinkable PVC polyvinyl chloride plastic tubing. This flexible, electrical insulating tubing is extruded and its expansion is arrived at thru a patented secondary operation which builds a memory into the material. The memory is activated via the application of heat at approximately 130°C (266°F). The thinner the wall, the faster the shrinkage. The heavier the wall, the slower the shrinkage. In each case, the diameter is reduced to a pre-determined size upon the application of heat and will maintain strength, insulating properties and form stability.

Material is SK265 PVC (Polyvinylchloride), flame resistant, self-extinguishing, dimensions as supplied in its expanded stage and after its recovery, with application of heat in excess of 130°C (266°F) shall be in accordance with noted table. Longitudinal shrink shall not be greater than 10%.

- NEW ALL PURPOSE TUBING—HAS CONTROLLED SHRINKAGE.
- SHRINKS IN SECONDS.
- FORMS A PERMANENT, TIGHT MECHANICAL BOND.
- PVC (POLYVINYLCHLORIDE).

BIRFLON SHRINK SERIES TE TUBING
HEAT SHRINKABLE TEFLON* TUBING

Is a Class C material modified from polytetrafluorethylene. The tubing will shrink when heated to 621 F. (It should be heated until it turns semi-transparent, then the heating process immediately stopped. Overheating can cause splitting, therefore trial and error testing is recommended to establish the proper time and temperature for each application.) Correct procedure will result in a snug-fitting insulating wrap possessing hi-heat resistance, superior chemical resistance, and excellent electrical characteristics. The tubing is available in a full range of colors.

BIRNBACH

TUBULAR BRAID PER MIL SPEC. QQ-B-575

Manufactured completely round as noted in MIL Spec. QQ-B-575, this tinned copper shielded braid has self-supporting characteristics which enables it to maintain its round shape. The shielding coverage percentage is 95% or more. This tubular braid is used in military applications where maximum shielding against electrostatic interference is indicated. In addition, it is used as a protective covering against mechanical abrasion and stresses for the wires, cables and other components.

RETRACTILE KINKLESS POWER COMMUNICATION CORDS

This series of Birnbach Coiled Kinkless Retractile Cords are permanently coiled into a spring-like shape without the use of metal springs or elastic bands. They have inherent "Recovery" properties. These Retractile cords extend approximately six times its retracted length, returning to its exact original shape and length when released. Always as long as you need them and no longer, they will not kink, tangle, trail, knot or dangle on the floor or bench and cause accidents. Useful wherever cords or cables must change length or position.

RETRACTILE (KINKLESS) POWER CORDS RUBBER, NEOPRENE AND PLASTIC — UL AND CSA APPROVED

DESCRIPTION: Multi conductor power cords, each conductor stranded copper, tough neoprene jacket overall UL and CSA approved. Available from stock in indicated lengths, can be cut to desired length.

PERMALINE TV TRANSMISSION LINES

It is now over ten years since Columbia introduced Permaline television transmission line, the only television wire available today with a written guarantee against deterioration. In all this time we have yet to replace one single foot of this wire for reasons of deterioration, proving beyond all doubt that Permaline insulation has no equal for long life under the most severe atmospheric conditions.

Permaline is a high molecular weight polyethylene containing a very small percentage of carbon black to provide maximum resistance to the ultra violet rays in sunlight which has been proven the chief factor in the deterioration of ordinary television wire.

Electrical characteristics of Permaline are very similar to brown polyethylene television lines, but as there is no deterioration attenuation remains constant instead of increasing as is the case with brown polyethylene which becomes brittle and cracks. Remember it is not how THICK but how GOOD!

PERMALINE VHF-UHF TV TRANSMISSION LINE

Since the introduction of this cable in May, 1956 it has been proven beyond any doubt that this cable has no equal for reliability over the entire range of VHF and UHF channels under the most adverse conditions, such as salt spray, sunlight, extremes of heat and cold, stress cracking, chemical fumes, whipping in high winds, etc. In many areas throughout the country where other cables have failed due to salt deposits on transmission lines, this cable has given satisfactory reception at all times. Foam polyethylene tubes provide excellent low loss dielectric and require no sealing. 22 gauge solid copperweld conductors mean high tensile strength so necessary where whipping of cable is a problem. Heavy duty jacket of high molecular weight BLACK PERMALINE POLYETHYLENE is a protection against all hazards. We believe this is the finest all-purpose television transmission line available today. Impedance is 270 ohms, nominal attenuation is 3.2 D/B at 500 M/C and 4.6 D/B at 900 M/C. Cable size is approximately .295 x .402.

PERMAFOAM LOW LOSS COAXIAL CABLES

PERMAFOAM is a new type of coaxial cable for television systems, communication work, and all other co-ax applications. A foam polyethylene dielectric replaces the conventional solid polyethylene thus providing far lower capacity and attenuation. In fact, attenuation is approximately 25% lower than standard coaxial cables of same type. Overall jacket is our PERMALINE high molecular weight polyethylene. This non-contaminating jacket is unaffected by salt air, chemical fumes, damp rot, fungus, acids, alkalis, etc., and is remarkably resistant to all extreme weather conditions. Moisture resistance is so high that this insulation is now used on submarine cables. Will withstand severe temperature extremes and is immune to the deteriorating effects of sunlight and other ultra violet. Note: In addition to the PERMAFOAM cables listed below, any other RG U cable is available with a foam polyethylene dielectric on special order.

FLEXFOAM ULTRA LOW CAPACITANCE MICROPHONE CABLES — EXCLUSIVE WITH COLUMBIA

Another Columbia first is a complete line of microphone cables with capacity as much as 35% lower than the best regular microphone cables available today. This drastic lowering of capacity has been made possible by the use of foamed polyethylene as the inner dielectric instead of solid polyethylene as normally used. This low capacitance means that lengths of microphone cable can be increased as much as 50%. These cables are also ideal for Hi-Fi and high quality sound work because of the extremely low attenuation, particularly at the higher audio-frequencies. The use of a special flexible vinyl as an outer jacket provides flexibility practically as good as rubber yet has much greater abrasion resistance. Color—Grey.

Also available in high gloss gleaming white jackets.

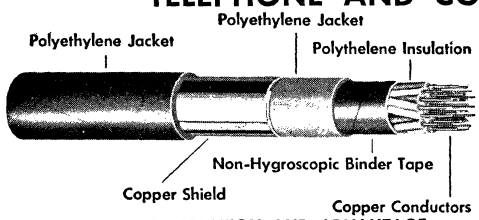
TELEPHONE AND COMMUNICATION CABLE DIRECT BURIAL TYPE

FULLY COLOR CODED



GENERAL APPLICATION AND ADVANTAGE

APPLICATION: Communication and Telephone Cable for use in **direct burial installations** provides a high quality product similar to that used for aerial and duct systems, but with the addition of protective armoring. This minimizes the possibility of damage to the cable from rodents and insects and, correctly installed, reduces the dangers to the cable from sharp stones and other hazards of underground burial installations.

ADVANTAGE: The lightweight, but rugged construction of direct burial Communication and Telephone Cable permits fast and economical underground installation of communication systems with the assurance of dependable and enduring service. This is made possible through utilization of the same high quality polyethylene compounds that are used in its counterpart for aerial and duct type installations, with the added protection of copper armoring tapes and a durable, high-molecular weight, polyethylene jacket.

SPECIFICATIONS

Solid bare annealed copper 22 Awg. gauge conductors; thin wall, color coded, polyethylene insulation; conductors twisted to form pairs with symmetrically varying lays to minimize cross-talk; cabled (for 6 thru 50 pairs) by stranding pairs in concentric layers, or (for 75 thru 400 pairs) by stranding pairs into concentrically formed units, which are in turn cabled to form the complete assembly; non-hygroscopic binder tape furnishing high dielectric strength between shield and individual conductors; continuous copper shielding tape; high-molecular weight, polyethlene jacket.

DAFLEX - DAFLON HEAT SHRINKABLE TUBING

IRRADIATED POLYOLEFIN TUBING

Shrinkage Ratio: 2:1 (50%)

DAFLEX SH-275 (colored) and **SH-270** (clear) Series are an irradiated, thermally stable Class B (130°C) material extruded from specially formulated polymers. Comes thru in expanded sizes. It insulates, jackets, splices, encapsulates, weatherproofs components, connectors, cables or other irregular shapes.

When exposed to heat (235°F) the tubing shrinks 50% in diameter, 5% longitudinal contraction, forming a tough, smooth insulating covering with excellent chemical and oil resistant properties and electrical characteristics. Meets or exceeds requirements of MIL-I-23053 (WEP) Class I.

HEAT SHRINKABLE TEFLON* TUBING

DAFLON SH-400 (FEP)

Made with Modified TEFLON* FEP will shrink over inserted objects upon exposure to moderate heat. Heretofore, many joints, parts, components, devices could not be protected because of hi temperature required for shrinkage; Can now use this FEP TEFLON* which has a continuous service temperature of 400°F. Will shrink at 300°F. Supplied in natural color. Complete shrinkage at 350°F. Now, many heat sensitive products can use the permanent protection of TEFLON.* Will not burn or support flame, long lengths available. Extruded.

Multiple Conductor Cables!

National Wire & Cable Corporation manufactures a complete line of multiple conductor control cables. Conductors are of tinned copper strand with primary insulation for use up to 105°C per MIL-W-16878D Type C. Insulated for 1000 volts working voltage. Conductors are color coded using 10 standard basic colors, plus spiral tracers on white per MIL-STD. 122.

All conductors are planetary cabled and contra-helically laid with a Mylar tape serve over the cable bundle. The overall jacket is a 105°C black Thermoplastic or may be Neoprene to MIL-R-6855 Class 2 Grade 60 specification.

SHIELDED CABLES

National Multiple Conductor SHIELDED CABLES are to the same specifications as above with addition of tinned copper braided shield over cable complex with 85-90% coverage to MIL-C-7078A. STANDARD PUT-UPS: 500 ft. and 1000 ft. No-deposit reels.

TECHNICAL DATA (all cables)

Insulation Breakdown Voltage:	Greater than 8000 volts AC RMS, 60 cps.
Capacitance:	Nominal capacitance from a wire to all else in the cable ranges from 40 to 65 mmfd per ft., @ 1000 cps; dependent on cable construction.
Insulation Leakage Res.:	200. megohms/1000 ft. min. at 500 VDC from any conductor to all else in cable.
Sheath Leakage Res.:	10. megohms/1000 ft. min. at 500 VDC from overall shield through sheath to outside world.
Useable Temp. Range:	Suitable for continuous use from +105°C to −55°C.
Cold Bending Capability:	All cables are suitable for flexing to a circle diam. of approx. 6 cable diameters from +105°C to −20°C; Recommended flex diameter should be greater than 20 cable diam. for flexing at −40°C., or for continuous flexing service to −55°C, specify our neoprene sheath, in lieu of plastic sheath.

MULTI-CONDUCTOR STOCK CABLES

Conductor sizes 22, 20, 18, 16, 14 & 12 gauge. 22 AWG is 7 strand. All others 19 strand.

BLOCKS ONLY WITHOUT DRIVE-IN HARDWARE

Complete with 2 plated screws for use as spacer blocks in making your own open line installations.
Saxton No. 6000
Net Price ..... .11½ ea.

Especially designed for use with open line transmission wire installations. Tighten screws after pulling wire taut. For use as spacer, partially tighten set-screws. This permits movement of wire in the slots and avoids potential wire breaks. Use outside slots for 600-ohm wire. The "Tappee" Stand-off Insulator is good for community installations where random spacing of open line is desirable to avoid tuned circuits. Ideal also for use as anchor point or spacer for "fence wire" installations. "Tappee" permits inexpensive, time and labor-saving, trouble-free installations, and is made for use with No. 12 thru No. 18-gauge wire. Hardware constructed of double-dip galvanized steel; block is high impact polystyrene.
